The Statue in the Grotto.

Mystery of the Sunk Ship and the Dead Men Under

A—The Berwick Castle about to strike the submerged torpedo boat's omniscience. B—How the submarine killed so that its bow was crushed by the steamer's keel. C—How the submarine sank while the Berwick Castle went ahead totally unaware of the frightful tragedy just enacted. D—The submarine's eye, or omniscience (reflection of battleship is caught on lens, transmitted to reflector B, then down to C and across to D, where the officer in the submerged submarine sees a perfect miniature reproduction of the battleship, and is able to exactly determine its course and position).

What Was Wrong with the Torpedo Boat's EYE?—A Secret Locked Up in the Breasts of the Drowned Crew Which Has Sent a Nervous Chill Through the Navies of the World.

THE appalling disaster to the British submarine torpedo boat A 1 has revealed a most fatal defect in the construction of this type of fighting craft, which naval experts did not suppose could possibly have existed. It has shown the little submarine to be a death trap or a character almost too horrible to comprehend.

Without one moment's warning of the fate about to overtake them, with grim darkness surrounding them and with all possibility of escape absolutely cut off, the British torpedo boat officers and men in submarine A 1 were sent to the bottom in three fathoms of water. The boat was struck and overturned on dry water, leaving the men in the danger of running machinery, spouting the gasoline tanks and filling the boat with suffocating gasoline fumes. These fumes alone were sufficient to kill the entire crew of the submarine within a very few seconds. In addition, a hole was cut in the boat's hull, and through this the water poured in, displacing the air and drowning the men who had not already been suffocated to death by the gasoline fumes.

There are many questions which can be given to this line in the question, "What caused the accident?" and that is, that the submarine's eye was blind and the men of the boat did not know it.

Submarine A 1 lies at present in fifteen fathoms of water near the Nab lightship, off the coast of the Isle of Wight. Since she was found there by divers, on March 30, half buried in the mud, instructions attempts have been made to raise her.

Officers who have examined the wreck say that the sight is one of the most ghastly and horrible they have ever seen. Behind the wreck lies one of the most ghastly and horrible they have ever seen. Behind the wreck lies one of the most ghastly and horrible they have ever seen.

The submarine was taking part in the naval maneuvers of the Isle of Wight at the time of the accident.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

the submarine so that the bow met the Berwick Castle's keel and was pushed in. The accident happened at three o'clock in the afternoon of Friday, March 26. At that hour of the day it is to be reasonably supposed that the omniscience of the submarine was in an alert state all round his ship within a radius of a mile or two.

The weather was not bad. As a matter of fact, the sun was shining brightly, and that the accident could not by any means be attributed to fog.

In spite of all the favorable conditions for making observations, the submerged submarine overlooked the steamer to reach and actually strike her without being aware of her approach. It will be impossible to account for this mysterious feature of the tragedy until the boat has been raised and examined.

A remarkable feature of the accident is that the Berwick Castle was entirely unaware of the death it had unwittingly dealt her. The captain simply reported by signal that he had struck a torpedo, and that reason no attempt was made to save her.

However, any attempt would have been unavailable. As soon as she was struck the submarine sank like a stone, carrying down her crew in their armament.

It was not until several hours had elapsed that the submarine boat was raised. She lay on the bottom, but the work of raising the boat to the surface had to be postponed for some time.

At first, light rays were used in the search for her. Diving bells were sent down to the bottom to search for the boat. The search was continued for several days.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The only possible answer that can be offered is that the submarine's eye had gone blind and not one of the eleven unfortunate men inside of her was aware of that fact.

This eye, or omniscience, is used for observing purposes when the boat is submerged. It consists of a series of double convex lenses and reflectors arranged inside a long brass tube about six inches in diameter. The tube is telescopic and can be extended to a total length of eighteen feet.

The omniscience only comes into use after the boat has been submerged and the officer in command needs to keep an eye on the surface of the water for some reason without allowing any other vessel within his range of vision to sight the submarine.

For instance, if the submarine has been submerged to a depth of twelve feet below the surface of the water the telescopic omniscience is lengthened until the upper end projects sixteen inches or so above the water. This helps in sighting the enemy.

Consequently much advantage is gained, once the enemy has been sighted through the omniscience, by having the upper end of the omniscience, in which are the reflector and lenses, as close down to the surface of the water as possible.

Then the submarine can watch its intended prey from a few inches above the water, while the enemy is completely unaware of its presence.

Everybody who has held a few inches of a telescope to the eye can see the principle of the omniscience. The camera-obscura effect is obtained by an angle in a boat on the roof of the building throws a reflection on to a round white table inside the building. Looking down at the table after the building has been darkened the spectator sees a perfect miniature reproduction in natural colors of a wide section of the grounds outside the building.

Men and women, about three inches tall, are to be seen walking about, and the houses and show trees are reproduced in exact proportion. When the mirror is shifted the scene changes to another portion of the Park Ground, and so on. It being possible by turning the knob completely around once to have embraced all the surrounding territory for a distance of a mile.

The omniscience is operated in exactly the same way. The cable of the submarine is quite dark when the boat is submerged and the chief officer stands looking intently at a small ground glass set into the omniscience tube and turns the knob around until the ground glass reveals the view of the ship for which he is watching.

The omniscience used on the British submarine No. A 1 was equipped with two lenses, each embracing about twenty-one degrees of the surrounding view.

The only exception at present is that the lens covering the course over which the Berwick Castle was approaching was blind. This means that the angle of the lens had been drawn up so that the reflection was cast against the side of the tube instead of the reflector through which the omniscience officer was watching.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The British battleship, which was the target of the submarine's attack, was the British battleship, which was the target of the submarine's attack.

The ill-fated British submarine torpedo boat and Lieutenant Loftus Managh, who was in command when she went down.

The only possible answer that can be offered is that the submarine's eye had gone blind and not one of the eleven unfortunate men inside of her was aware of that fact.

This eye, or omniscience, is used for observing purposes when the boat is submerged. It consists of a series of double convex lenses and reflectors arranged inside a long brass tube about six inches in diameter. The tube is telescopic and can be extended to a total length of eighteen feet.

The omniscience only comes into use after the boat has been submerged and the officer in command needs to keep an eye on the surface of the water for some reason without allowing any other vessel within his range of vision to sight the submarine.

ADVANCE FASHION NEWS FROM PARIS

A--Reception dress of primrose-colored mousseline de soie, trimmed with transparent lace.

D--A smart morning blouse of spotted delaine.

B--Fetching design for a morning costume that is dressy and simple.

THE result of my tour among the leading modistes of Paris has revealed a lack of energy and invention in most of the representative houses.

Chiffon alone has made a radical departure from former styles, his silhouettes being absolutely different.

For instance, his skirts are much fuller; he favors gathers rather than pleats, and he has made most radical changes in the bodices. The houses have mostly disappeared and are to be replaced this season by closely draped pointed bodices. This effect will be enhanced by full elbow sleeves. From the elbow down will run a long undersleeve of lace which ends four or five inches above the wrist, leaving the forearm bare. This effect will be found even in coats. Paquin has entirely abolished the full sleeves with tulle or frills introduced with such popularity a year ago. The skirts are now so wide that it is necessary for the underskirt to be worn corded round the bottom to support the fulness of the outer skirt and make it fall in the necessary graceful folds.

I apprehend that the cost of dressing well in New York during the season will be heavier than before for the reason that Paquin's changes involve the use of much more material. Fathers and mothers may prepare to groan at the dressmaker's bill.

The dresses on the French stage have been very disappointing. In the course of my tour through the Paris theatres I saw only two good dresses, and one of these was the dress worn by Mlle. Brandes. The gowns carried on the English stage are about as poor in cut and style as they well can be. The dress worn by Miss Marie Blington in the "Duke of Chillon" was perhaps the best of a bad lot.

All the fashions of New York this year will turn to the new soft mousseline tulle which will be worn for every kind of gown whether for tea, or day, street, or full dress. A perfect fever has grown up for these dresses, which have the advantage of simplicity and are easy to handle. Apart from the features I have indicated I scarcely think that there will be any radical change from the fashions in vogue last year.

It is interesting to watch the unfolding of Spring colors in model costumes being built for and worn by the smart set abroad. The wearing of color is, in a measure, affected by climate. One sees much more color and much brighter tints along the Riviera and in Paris than in London. The murky atmosphere of London and the London mud to "tough" women to spoil delicately tinted frocks by exposing them to these destructive agencies. Nevertheless some women are seen on the streets of London wearing the complete white costume, which are at present so smart over here, and holding up white skirts to disclose a contrast of unlovely muddy boots. These dresses in white are popular and especially are cream-tinted gowns for wear in restaurants having a vogue. These are dressy without being elaborate and are a happy medium between plain morning frocks and dinner gowns as we know them.

Pastel tints in dresses are having a great following and it would be hard to find a complexion that cannot be found in some of these pretty and delicate hues.

Every cloth, trimmed with Irish lace or with a coarse quality of tulle, is being much used for reception gowns and for the same purpose perfectly fascinating gowns are made up in the new crepon de soie.

These frocks are often made high in the neck and serve many purposes. White homespun, white flannel and black and white costumes are all to be found among smart dresses for home wear.

Crepe de Chine is steadily increasing in popularity here as well as in America. It lends itself so admirably to the long, soft, full dress folds that women love and make up so charmingly with most varieties of trimming.

Quite a plain frock, worn with a large pelerine of either crepe or fine lace, makes a smart but comparatively inexpensive costume. A charming finish is also found in the careful adjustment of a soft black satin or chiffon neck, or a waistband with ends of lace and ribbon.

White skirts are very full women have no need to be alarmed over their effect upon feminine figures, for the clever dressmaker arranges the pleats on the hips and at the waist in such a manner that they

C--A dainty tea gown in the new tint called flame pink of mousseline de soie with an overdress of Chantilly lace.

to the hem with wide bands of almond green, pale blue or pink cloth, cut in irregular shapes at the top and applied on to the short upper skirt with embroidered poppies, small braids or some delicate applied design of the same color scheme, which must be repeated in the trimming of the bodice.

Naturally such a dress is rather daring and the colors must be very soft and subdued, and the trimming without strong contrasts in order that the gown may be elegant instead of showy.

With such dresses one sees a little butterfly bow of black velvet at the waist and again upon the cuff as a relief to the pink.

Figure A shows an exquisite design for a reception dress of primrose-colored mousseline de soie. The skirt has three deep tucks around the middle, below which falls a deep dounce of transparent lace, and a little distance below the edge of this dounce three more tucks hold a still deeper dounce that is more than twice as deep in the back as it is in the front.

The bodice is exceedingly graceful and original in style. The top is shaped like a round yoke, sloping downward in front to a point, quite far down, at the crossing of surprise drapery from the right side to the left. The stock and top of the yoke are tucked in circular tucks and where these end in front the mousseline is gathered and falls full upon the crossed surprise sides of the bodice. Five graduated bows of primrose-colored satin trim the front of the yoke. The fitted shoulder effect is produced by means of eleven tucks in the lace surplice, which fits upon the shoulder and over the top of the arm, allowing the fancy portion of the lace to fall in a full flounce over the arm and across the front of the shoulder. The fancy edge of the lace continues along the edge of the surplice, which is fastened at the left side. A charming effect is shown in fitted sleeves of alternate tucks and inserting, ending in a pointed effect upon the hand. From under the lace flounce upon the top of the arm falls a full drape of mousseline de soie, which is gathered at the bottom and caught up on the back of the wrist by means of two dainty choux of chiffon. The mingled tulle of primrose and foamy white lace, with soft draperies and a touch of glistening satin in the bows, and wide, draped girdle, make an ensemble that is the essence of figures and a delight to the eyes.

In Figure B is shown a very smart model of a morning costume that is at once dressy and simple. The full skirt is finished at the bottom with two deep, old-fashioned ruffles, the upper one headed by a ruching where the gathers are arranged. The belt is wide, diamond and pointed in front and a soft, full shirtdress is just hinted at beneath the fronts of the short jacket and in the front where the jacket flaps open, disclosing that a double pleated tab of lace hanging from a stock of soft lace folds. The lace is repeated in the full ruffles that hang from the wide jacket cuffs, shaped like big, turned-back wristbands finished upon the edge with narrow braid between the bands of velvet, and a little skirt trimming. Two buttons are placed upon the cuff. The front of the jacket is shaped to fit the figure loosely, and is trimmed along the edges with the braid and velvet trimming and along the top of the bodice with a row of buttons. It is cut out upon the skirt front at the top in points and away from the front in two points at the bottom. Across the upper arm the jacket has a band of trimmings like an armband, that confines the fulness of the sleeves at that point. The very full sleeves are again gathered into the wide cuffs.

Primrose-colored mousseline de soie is covered by a short one of lace to some distance below the knees. The lace gown is finished with a flounce and a wide, lacy, incising edged with ruching. Down the front are five large bows of lace drapery of the lace and surprise glow of the mousseline beneath it. The low-cut neck is covered around the back and over the shoulder with a deep cape of lace, the full sleeve is caught below the elbow by a row of buttons that hang a deep lace flounce with the puff of the sleeve drooping over it. A charming touch is given to the fronts of the cape across the bodice with a row of buttons and bow, and as these fronts slope away from the neck this left lace to the décolleté of the bodice.

This exquisite creation in the way of a negligee is afforded quite a contrast in the simple but elegant morning wear shown in Figure D. This is a good illustration of old-time fabric in a slight change of weave and, in this case, so dotted with blue and pale rings of color. The front of the blouse is cut in one piece with the pointed cape that extend over the shoulder upon the upper arm, and the fulness in the round neck is gathered to a band that is covered by loose folds of soft satin tied in a knot in front and allowed to hang to the waist, where several knots and cords form a decoration. The full sleeves are gathered under the fitted cap of the top and to the fitted wristband of lace, with a shaped edge trimmed with a fold of satin that is a smart round yoke and stock over the waist, and the satin may be omitted where so thin a yoke-piece will be worn, as it is smarter not to have lines under these little lace necks.

Improve the figure rather than detract from its elegance. The most successful full skirts are those which are made in fabrics sufficiently soft to fall of their own volition into graceful folds.

Gauging and pleating did much favor among the new full skirts, and many of these are now done by machinery, with extremely good effect. Coarse canvases, hopsacks and voiles all lend themselves admirably to pleating and gauging.

Mousseline de soie is one of the most popular of thin fabrics for wear abroad, while for general gowns voiles—especially chiffon voiles—leads everything else. Some dear little frocks are being made up of it in the new full skirts, with simple tucks around the bottom, or dainty frills or equally attractive and effective ruffles.

In the way of novelty Paris is exhibiting quite a taste for dresses made of white cloth, knitted from the waist

ATTENTION, AMERICANS! HERE!

What
will
you
do?

THE DUKE
OF
SUTHER-
LAND

The Duke of Sutherland, Father of the Most Desirable Young Marquis in England, Comes to America to Look Over the Field.

It is always an event worth chronicling when a duke comes to America. Naturally a duke is a duke, and there are prominent families of them left in England one may name them on the tips of one's fingers. The marriageable ones are pretty well gone, being already husbands. But they are also fathers. This fact makes the coming of the Duke of Sutherland, who arrived in New York recently from England, one of the most important events of this social season.

The Duke is a father. He has a son, six boys in his vast estates and numerous names. That son is growing up, he is in his seventeenth year, he will be tremendously rich, tremendously powerful. He is, as he should be, the apple of his father's eye. He is, as he should be, the darling of his mother's heart.

There are other children, a boy and a girl, but this is the eldest, the Marquis of Stafford. On him depends the future of the House of Sutherland, the future of one of the greatest houses in all England.

The news that the father of this young man, Countess Sutherland-Leveson-Gower, the fourth Duke of Sutherland, was coming to America, set the tongues of gossip wagging.

What was he coming for? Naturally to see America, to visit the country from end to end, to look into her mechanics and manufactures, to study her manners and her ways. But behind this, hidden a little, but secret, there is another object. The Duke of Sutherland, they say, is here to study the American girl—the American girl as a possible wife and future mother—the American girl as a possible fifth Duchess of Sutherland.

AS GUARD FOR THE FUTURE DUCHESS.

You may never tell about the heart of a boy, it may fly out of his keeping any minute. The mother of the young Marquis of Stafford is clever enough to know this, as she knows other things. She is a student of nature and a writer of books. She is the witty and accomplished daughter of the fourth Earl of Roslyn—a woman of brains and determination, a woman who prizes herself, as have all the Duchesses of the House of Sutherland, upon being prepared for any emergency.

In the years when her son has been at Eton and Oxford growing up she has noted that the prettiest titles of England have married the wiser to share them with American brides. She has seen in her house the Duchess of Marlborough, the Duchess of Manchester, the Duchess of Devonshire and a dozen other American girls who have conquered titles only a little less famous.

The Duchess of Sutherland admires American character, exceedingly. This she has declared frequently and openly. The Duke shares her opinion. There are plenty of marriageable girls in England, but there are not many with fortunes equal to that which young Stafford will inherit. In America there are not many either, but there are some, and it is whispered that the Duke, egged on by his clever wife, is here on a tour of inspection. He is to look us over.

He realizes perfectly that in the next two or three years his son will discover that he has a heart. It is a way boys have, even the most ordinary, untitled of them. There comes a time when the cut of their coats and the colors of their cravats are important to them as ever they were to their mothers. For that reason the Duchess of Sutherland is preparing.

In an American girl or an English girl to be the future mistress of Freshwater Hall, of Stafford House, of Dunrobin Castle, and all the other vast and splendid Sutherland estates that make the present Duke, next to the young Duke of Westminster, the richest peer of the realm.

You see, said an authoritative person, explaining the feelings of the Duke and his Duchess, "Americans are all over the country. The young Marquis is apt to fall over them wherever he goes at any time, and in as instant, as the wrong instant it may be, when they may be out of his knowledge. To prevent any catastrophe his courtship is to be directed from the beginning."

The danger is imminent—he will be seventeen on his next birthday.

The English Duke is naturally sufficiently known to their time. The young Marquis, a mixture of titled title, money, and of whom would be possible, some more and some less so than others. But there is a chance that he may not fancy any of them. He will travel about the world to fit him for the great position he was born to. He will go to America. He may fancy an heiress there. If he should, well and good, but of course her bringing up must have been like his—the best. She must have had of her family and money. She must be an aristocrat of her own country. No parents could ever hope to raise over that House, which today is the center of the intellectual, literary and social life of England.

The little Marquis of Stafford may fall in love with an American girl if it pleases him, but before he runs a chance of meeting her his eyes will have seen just how she stands in her own country. And that, it is whispered, is the object of the Duke of Sutherland's visit.

True and true—this object as you please, it is a compliment.

and so little Miss Knickerbocker and her best put on her very best smiles and her very best looks to greet the papa of the little boy who will some day inherit his million acres of land. She is still so young that she will only be called upon by her ambitious mamma to come to for a moment and how the prettiest she knows how. She probably won't know who she is doing it, nor will she much care. But her mamma, that more lady. Her mamma is doing the work for her now. Her mamma is looking to it that she will have an even chance with all the other American heiresses who may be worthy of the Duke's attention.

GIRLS WHO MAY BE REAGIBLE.

The future Duchess is probably now anywhere from eight or ten years old to sixteen. The present Duchess, Lady Millicent St. Clair Erskine, a sister of the lovely Countess of Warwick, was a half grown, blushing young creature, not quite seventeen years of age, when the Duke first beheld her. The story is that he was dining in a certain country house and she came in to desert with her long, tall hair floating over her shoulders and a sky look in her eyes. He forgot to take any dessert, and that was the beginning. The end the world knows.

The Duke remembers how he fell in love. "In a flash," he has said and it happened to be with the right girl. It is a tradition that the men of the House of Sutherland always do marry the right girl. It is the reason they have been called the luckiest of the great English families. (Ireland described them in "Lalage" as the British family and said of them that they have had for generations an unvarying aptitude for "assimilating heiresses." As a consequence the family which started as simple Yorkshire spinners of the name of Erskine have their way to be less than a century and a half to the five baronies, five earldoms, a marquessate and a dukedom which they now own.)

Traditions must be respected. An heiress of the right sort must be found for the young Marquis of Stafford. His new life must be assisted. How do you wonder that the Duke of Sutherland's arrival marks an era in American social history?

Can't you fancy how little Miss Marjorie Gould's nurse has already perked up her ears at the idea of a fine eligible duke?

On the lookout for an heiress, is he? Well, well, well, who will find two finer ones than right in Mr. George Gould's house, where Marjorie, aged thirteen, and Vivian, aged eleven, are growing up under a careful mother into everything that a future Duchess of Sutherland should be?

And it is highly possible that the discriminating Duke may agree with little Miss Gould's nurse. For besides being betrothed to millions Marjorie and her sister are splendid examples of what a fashionable American mother may accomplish when devotion to her domestic circle comes first in her list of duties.

They are splendidly brought up, both mentally and physically, spending more than half of their time, as an English gentleman would prefer, in the country. At Georgian Court, with its famous lawns, its forests, its polo, its tennis, its croquet, its fox hunting, its swimming pond, its gymnasium, Marjorie and Vivian should be given education to everything that is best in womanhood.

But the Duke of Sutherland is here on a tour of inspection. He is to look into the country affairs of a choice of heiresses.

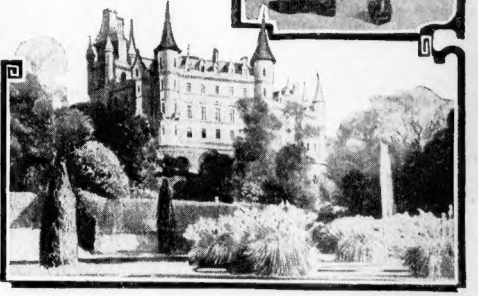

He is certain, on his return East for the Newport season, to glance at Miss Vanderbilt, the youngest daughter of the late Cornelius Vanderbilt and undoubtedly heiress to her father's vast estate. He will also, it is said, call on the heiress of the late William C. Whitney's \$25,000,000.

He will also call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000.

He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000.

He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000.

He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000. He will call on the heiress of the late William C. Whitney's \$25,000,000.

The Marquis of Stafford, the Duke of Sutherland's Oldest Son and the Most Eligible Young Nobleman in Great Britain, and Dunrobin Castle, One of His Estates.

At this season of the year he is most probably at Dunrobin, in the county of Sutherland, a splendid domain divided into avenues, glades and terraces, where the flower beds are now with a hundred colors and whose fountains fifty feet high are constantly at play.

Under a great gateway, more than a hundred feet high, he will some day conduct his little into a noble mansion surrounded by parkland with the most beautiful views of the houses of Sutherland, Leveson-Gower and where the Duke is really clever, that he doesn't care a fig about saving his name in the papers, but that he does care about the value of his possessions, and that he has done, till his fortune is said to be nearly the equal of that of the richest of English peers.

There is no doubt that his heir will be a tremendous catch. But if he takes after his father he will not be an easy one. And, by the way, he is said to be amazingly like his father—serious, thoughtful. His father didn't marry in a hurry. For a prospective Duke he waited an unusually long time, and when he announced his choice every one said he was clever.

If the future Duke of Sutherland be guided by his mother he will fall in love with what she has been pleased to describe as the emancipated woman with a sense of humor—the kind of a woman who knows a study of herself the ground she stands on, what her position is and what her capabilities are.

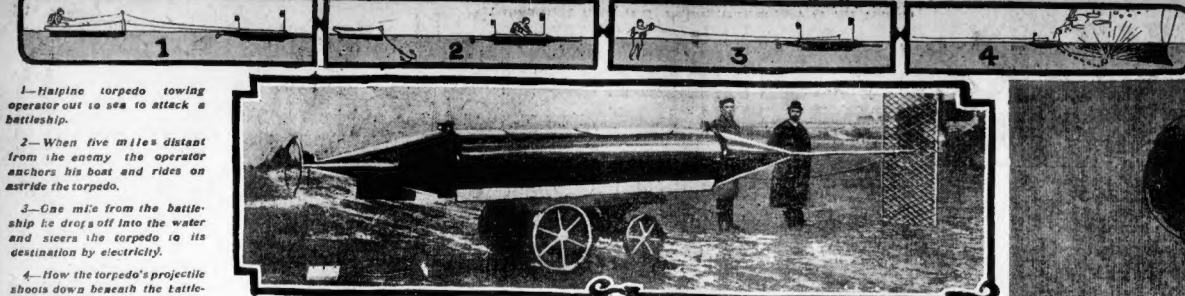

Where will such a one be found? It is to be hoped that the amiable father of the young Marquis of Stafford will settle his impression on her or on some of his suitors. When she married she was seventeen and the Duke was thirty-three. Since then she has

HER GRACE, THE DUCHESS OF SUTHERLAND

THE SUTHERLAND COAT OF ARMS

1-Halpine torpedo towing operator out to sea to attack a battleship.

2-When five miles distant from the enemy, the operator anchors his boat and rides on astride the torpedo.

3-One mile from the battleship to drag off into the water and seizes the torpedo to its destination by electricity.

4-How the torpedo's projectile shoots down beneath the battleship's torpedo net and strikes below the armor plate belt, blowing the ship to pieces.

Ingenious New Inventions to Fight Future Battles Among the Clouds and Under Water by Death-Dropping Airships, Dirigible Man-Ridden Torpedoes and Armor-Clad Motor Cars.

THE Russian Japanese war has stimulated into activity the inventive genius of the civilized world and brought forth several frightfully disastrous new weapons of war. If these new engines of destruction had been conceived and brought to a stage of practical perfection a few months ago, and placed in the hands of either the Russians or the Japanese, the whole complexion of the present conflict in the East might have been changed.

If Dr. V. A. Baranov's great military airship, which carries seven men and hundreds of pounds of explosive, had been sent out from Port Arthur under the Japanese flag, the present war might have been brought to a close the week it began. If this giant balloon, hovering over the heads of Admiral Togo's fleet, had annihilated the ships one by one, the Russian squadron would have been free to sweep the sea and prevent the Japanese army transports from leaving their base ports. Japan would have been tied hand and foot and left helpless with an army which dare not stir from its own island home.

If, on the other hand, Japan had been equipped with a dozen of the greatly destructive torpedoes invented by Lieutenant Nicholas J. Halpine, U. S. N., the entire Russian fleet might have been annihilated after the bottom of Port Arthur rendered within an hour after the war began. And yet these very torpedoes might have been in turn put out of action had the Russian navy been equipped with the chain of Mr. Stokes's floating forts, anchored outside Port Arthur harbor, with sharpshooters to pick off, one by one, the Japanese sailors as they rode by on the Halpine torpedoes.

Perhaps more amazing than any other military discovery in years is the astonishing new powder just perfected and patented and about to be thoroughly tested with experiments by United States Army officers. Mr. James C. Mitchell, the inventor, has built before the United States Government his remarkable formulae for a powerful gunpowder, which can be made to order in a few minutes on the field of battle—a soldier can mix it in an old barrel and in the midst of a rainstorm. It requires no effort on it. A sample was soaked in water for three weeks and used immediately after being taken out. The powder is a pliable granular substance, and has three times the explosive force of any powder now in use. It is smokeless and odorless. It gives off no gases of any kind, and will prevent the head-aches so frequent among the gunners after target practice. The powder cannot be exploded by concussion, but only by spark, making it safer to handle than the powder now in use. Tests made by Mr. Mitchell have shown the force of the powder to be sufficient to drive a bullet from a No. 30 Winchester rifle through thirty-two inches of oak, seventy inches of pine, and one and a half inches of steel at a distance of thirty feet.

The photographs on this page of the spar torpedo show how the projectile is submerged at the end of a long spar overhanging the bow of the boat, pointed directly at an approaching submarine and discharged. With the use of this spar the aim is more accurate than when a torpedo is fired from a tube or the projectile shot out of the mouth of a gun. In a battle between a submarine and a spar torpedo boat the chance would be all in favor of the latter.

A new type of the motor car has just been constructed by the British army, which carries a large supply of ammunition, a rapid-fire gun and two gunners. The motor is powerful enough to carry the car up very steep grades and across rough stretches of country. The sides of the car are armor-plated. Military experts believe that in land battles of the future the fighting motor car will play a very important part.

The floating fort, invented by Mr. Anson Phelps Stokes, of New York, promises to stir the entire civilized world in its latest incarnation, fight as gracefully as its forerunner, the famous monitor, did during the Civil War.

The Trident, as the naval fort has been named, is armored with 12 inches of plating down to the circular gallery running around her side, and below this to some distance below the water line, with quarter-inch armor. Her three fixed turrets, each of which is to contain an 8-inch gun, are of twelve-inch armor, as is also her central conning tower. The two bog gies which lie side by side across the centre of the ship are much longer than an enemy might imagine, as little more than their muzzles protrude from the side of the craft. The Trident will have a displacement of over 11,000 tons.

The floating fort combines a maximum of fighting force with a minimum of space, and consequently liability to be hit. It is claimed that a chain of these forts could effectively stop and sink the most formidable fleet ever against it.

Dr. Baranov's monster dirigible balloon is considered by experts skilled in warfare and aeronautics to be the most wonderful and terrible fighting airship ever conceived. It was constructed in a gigantic shed specially erected for that purpose near the Alexander Palace, London. It carries a crew of seven men, and is capable of travelling at any altitude and in any direction desired.

The chief value of the airship as a fighting machine lies in its ability to soar aloft, out of range of all modern guns, carrying dynamite bombs weighing hundreds of pounds. The balloon will get into position over one of the enemy's ships at sea, or over a town or fort on land, and carefully drop the loaded bombs. As the explosive area of these bombs is very large, they will spread death and destruction wherever they explode.

The construction of Dr. Baranov's military airship was watched with great interest by British Government officials, and just as soon as the first experimental test had been made the English Admiralty closed in upon whereby the balloon became a part of the navy's fighting equipment. The actual design is in an official secret, of course, but it is believed to have been finished. Dr. Baranov wanted half a million dollars for the plans of his dirigible airship even before the construction of the first ship was commenced.

Since the completion of this new aerial fighting machine it has been subjected to a series of official tests which are claimed to have been entirely satisfactory. Among other requirements the balloon had to carry aloft one dozen large dynamite bombs which were dropped over a stipulated area so that they exploded with fearful violence the moment they landed. This fully demonstrated the capabilities of the airship to completely annihilate an enemy's fleet, at the same time keeping beyond range of the most powerful guns of the battleship below.

Through the new secret channels of obtaining information the Press Government was kept aware of the progress of the nego-

Testing the arrow-headed nose of the Halpine torpedo at the League Island Navy Yard, Boston. The steel netting here represents the net of a battleship to show how the torpedo fires a projectile and begins to back away the moment it strikes the net.

THE OPERATOR RIDING THE TORPEDO.

TORPEDO BACKING AFTER DISCHARGING PROJECTILE (SHOCK OF EXPLOSION CAN BE SEEN)

Instantaneous photograph of the attack by a Halpine torpedo on an old ironclad hulk, taken just before the ship keeled over and sank.

The Stokes's globular naval battery, which, it is claimed, will be able to sink any battleship afloat.

How the Operator of the Halpine Torpedo Rides Out to Sea Going to a

shaft of the engine and the propeller shafts is 5 to 1. That means that for every revolution of the propeller the driving engine makes eight revolutions, while the propeller forward screw is eight times more powerful than that of the engine. The normal speed of the propellers is about 200 revolutions per minute.

The aeroplane by which the airship is raised and lowered while sailing through the air are mounted between the deck line and the top of the frame. There are thirty of these aeroplanes, arranged in three banks of ten.

The balloon proper has sufficient lifting power to counterbalance the weight of the ship, and the engine are, therefore, used upon both for propelling it in the direction of travel and for lifting it to the desired height.

Steering in a horizontal plane is effected by a large rudder at the stern. There is a complete system of communication between the chief command's deck and those in charge of the motors and the aeroplanes, so that the seven men operating them can be instructed easily what to do from time to time during the ship's flight.

The balloon itself is constructed of varnished silk, it is cylindrical in form, with a slightly pointed nose and a square

biplanar stern. It is 120 feet long and 35 feet in diameter. Its cubic capacity being 335,000 feet. When filled with hydrogen gas its lifting capacity is approximately 16,000 pounds. A ballonet, filled with air, is fitted inside the balloon proper in order to keep itself properly inflated, and in compensation for variations of temperature or lack of gas.

Just what one of Lieutenant Halpine's dirigible torpedoes will actually accomplish, in a "naval fight" will be best understood from the following description of the destruction of an invading battleship on Sandy Hook.

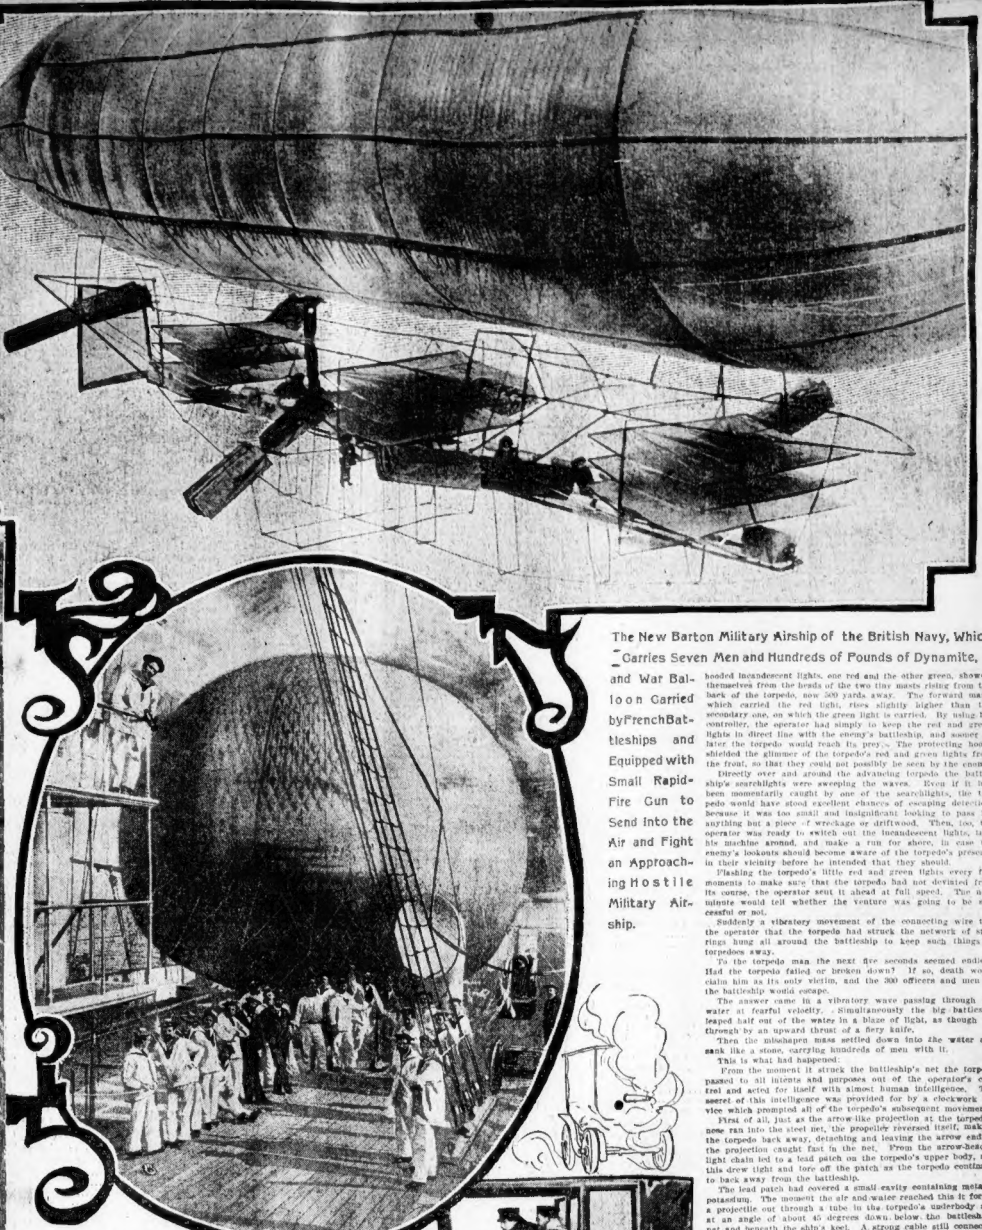

Word reached the Government station at Sandy Hook that several ships of the enemy's fleet had been sighted twenty-one miles off shore just before sundown. There was one first-class battleship, two armored cruisers, and four or five torpedo boats in the fleet.

The fleet was preparing to drop anchor when, suddenly, evidently with the intention of waiting the arrival of other battalions of the invading "grand navy" before venturing to draw closer and attack New

Instantaneous photograph of exploding bundles of dynamite dropped in rapid succession from swiftly moving military airship, showing how an approaching hostile fleet could be attacked from the air.

RIGHTFUL VIEW OF WEAPONS OF WAR

The New Barton Military Airship of the British Navy, Which Carries Seven Men and Hundreds of Pounds of Dynamite, and War Balloon Carried by French Battleships and Equipped with Small Rapid-Fire Gun to Send into the Air and Fight an Approaching Hostile Military Airship.

Until Within One Mile of the Battleship He Is Back.

York City. The prospects were that the enemy would not move forward for several hours, and perhaps not until shortly before darkness.

In any event there was time enough for the battleship to reach the enemy's battleship and blow it to pieces.

By this time it was quite dark. Neither moon nor stars were visible and looking out to sea nothing but the lily blackness of night met the eye.

In less than five minutes after information had been received at the battleship, the operator of No. 1 dirigible torpedo was ready for action. His preparations were quickly made. All he had to do was to put a cork jacket around his waist, say good night and step into a stanchy built little skiff fitted with the leading.

From a bomb-proof storehouse near the landing, the torpedo, loaded, primed and ready for service, had been carefully carried down to the water's edge and floated out alongside the battleship's skiff.

The torpedo man reached over and untied the small ring on the torpedo's back the size of a five wire. There was one mile of wire wound around a reel inside the torpedo and the operator attached to a command, not much larger than a watch, which he held in his hand. The other end of the wire was already coiled on, so to speak, to a wonderfully ingenious mechanism which actuated the torpedo's propeller and steering.

Without a light visible, and with nothing to guide him but a very small compass with luminous face, the operator rode out to sea, mile after mile, until far off to the right he caught the first gleam of one of the invading battleship's powerful searchlights as it swept from side to side, penetrating the murky blackness in search of torpedoes or other dreaded war craft that might venture an attack.

The operator pressed the controller button again, and it looked as if he was around to "right." Instantly the torpedo's steering apparatus, electrically controlled, responded, and the torpedo headed off to the right, making straight for the doomed battleship.

The operator's trained eye assured him that he was well within the mile limit before he slid off the torpedo's back into the water, trusting to his cork jacket to keep his head and shoulders well above water.

Taking a couple of turns of the controller wire around his arm, so as to relieve the strain which would be otherwise felt in the controller in his right hand, the operator pressed the button which started the torpedo, and, glancing drawing it along, he could judge, he was still five miles away from his prey.

Then he stopped the torpedo, and, glancing drawing it along, he could judge, he was still five miles away from his prey.

side his head, he untied the tow line and heaved a small anchor and a few hundred fathoms of anchor line overboard, and, stepping over the side, he sat astraddle the torpedo, and almost up to the hips in water.

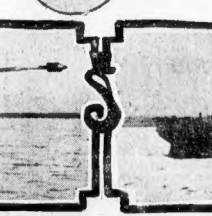

In this way he was ready to resume his journey, guiding the torpedo forward by means of the little controller, which he still retained in his hand.

Although the added weight sank the torpedo still deeper in the water, it did not seem to have any perceptible effect on its speed as it roared ahead. Within fifteen minutes from the time the boat had been despatched the torpedo had covered four of the remaining five miles between it and the battleship.

The operator's trained eye assured him that he was well within the mile limit before he slid off the torpedo's back into the water, trusting to his cork jacket to keep his head and shoulders well above water.

Taking a couple of turns of the controller wire around his arm, so as to relieve the strain which would be otherwise felt in the controller in his right hand, the operator pressed the button which started the torpedo, and, glancing drawing it along, he could judge, he was still five miles away from his prey.

Armored Motor Car with Rapid Fire Gun for the British Navy.

button again, and the torpedo shot forward once more. As it left the operator the reel of fine wire began to unwind inside the torpedo's body. This slender strand was now the only remaining link of communication between the operator and his faithful engine of destruction. Behind him were twenty miles of open water.

It was a matter of great importance now for the operator to see where his torpedo was heading for. The torpedo itself had been swallowed up in the lily darkness within a couple of moments after beginning the last stage of its journey. So the torpedo man pressed the controller button five times in succession, and the finger jumped to "lights." It response two little

hooded incandescent lights, one red and the other green, showed themselves from the heads of the two tiny masts rising from the back of the torpedo, now 200 yards away. The forward mast, which carried the red light, rose slightly higher than the secondary one, on which the green light is carried. It was his controller, the operator had simply to keep the red and green lights in direct line with the enemy's battleship, and sooner or later the torpedo would reach its prey. The glowing hoods shielded the glimmer of the torpedo's red and green lights from the front, so that they could not possibly be seen by the enemy.

Directly over and around the advancing torpedo, the battleship's searchlights were sweeping the waves. Even if it had been momentarily caught by one of the searchlights, the torpedo would have stood excellent chances of escaping detection, because it was so small and insignificant looking in mass for anything but a piece of wreckage or driftwood. Then, too, the operator was ready to switch out the incandescent lights, turn his machine around, and make a run for shore to escape the enemy's lookouts should become aware of the torpedo's presence in their vicinity before he intended that they should.

Flashing the torpedo's little red and green lights every few moments to make sure that the torpedo had not deviated from its course, the operator went it ahead at full speed. The next minute would tell whether the venture was going to be successful or not.

Suddenly a vibratory movement of the connecting wire told the operator that the torpedo had struck the network of steel rings hung all around the battleship to keep such things as torpedoes away.

To the torpedo man the next few seconds seemed endless. Had the torpedo failed or broken down? If an enemy would claim him as its own victim, and the 200 officers and men on the battleship would escape.

The answer came in a vibratory wave passing through the water at fearful velocity. Simultaneously the big battleship heaved half out of the water in a blaze of light, as though cut through by an upward thrust of a fiery knife.

Then the submersible mass settled down into the water and sank like a stone, carrying hundreds of men with it.

This is what had happened.

From the moment it struck the battleship's net the torpedo passed to all intents and purposes out of the operator's control and acted for itself with almost human intelligence. The secret of this intelligence was provided for by a clockwork device which prompted all of the torpedo's subsequent movements.

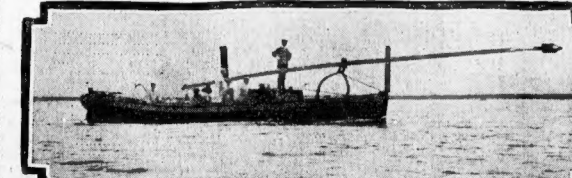

First of all, just as the arrow the projectile at the torpedo's nose ran into the steel net, the projectile reversed itself, making the torpedo back away, despatching and leaving the arrow end of the projectile caught fast in the net. From the arrowhead a light chain led to a lead patch on the torpedo's upper body, and this drew tight and tore off the patch as the torpedo continued to back away from the battleship.

The lead patch had covered a small cavity containing metallic potassium. The moment the air and water reached this it formed a projectile out through a tube in the torpedo's underbody and at an angle of about 45 degrees down below the battleship's net and beneath the ship's keel. A strong cable still connected the projectile with the arrow-headed projectile held fast by the torpedo net, and this pulled tight when the projectile had shot down through the water one hundred feet or more.

The projectile was buoyant, and the moment its downward flight had been suddenly checked by the cable it turned its nose upward and made for the surface.

The length of the cable, the distance of the torpedo from the battleship and the timing of the slow-burning fuse within the projectile had been figured out with such mathematical precision that when the projectile rose it struck the underbody of the battleship, below the armor plate line, and exploded, blowing up the ship.

The clockwork contrivance inside the torpedo had had meanwhile backed the torpedo away over the course it had come, the red and green lights flickering to show the operator where the torpedo was. A small ratchet inside the torpedo had also released a spring, which began to rewind the mile length of wire

The Spar Torpedo Poised and Ready to Be Fired at an Approaching Submarine.

How the Spar Torpedo Is Plunged Under Water and Fired at the Enemy.

which had been paid out after the torpedo left the operator. The spring was strong enough to wind all the wire on the drum. Consequently, if the operator waited long enough and held on tight, "climbing up on his back and cutting it in the direction of the ship," he could draw the wire back and the torpedo, being picked up by one of the United States torpedo boats sent to meet the torpedo, would be ready to launch.

Lieutenant Halpin's newest dirigible torpedo has already been put into service, and has been used in the most successful manner. A new and much improved torpedo of this type is at present the Crescent Mark II, of which there are several powerful hydrocarbon engines at the highest possible pressure being installed. These will give the torpedo a much greater speed and endurance than originally hoped for.

Calamarato DOCTOR OF BEAUTY ON

ONE OF
THE
METHODS
OF
ELECTRIC CUPPING
FOR
FILLING OUT A
HOLLOW

ATHELIASIS AND ELIC

Enter a woman who has tried to
hide her defects with cosmetics.

Q. I am quite conscious, doctor, that you
can see that I am painted, but I rouge,
powder, blusher to cover my defects. The
traces of my old and such seem to
have become visible. My cheeks are thin
and I have hollows under my eyes. Isn't it
best for me to use cosmetics?

A. No. The best thing you can do to
ameliorate the condition you describe and
work to hide. To cover over is not to
prove. Build up your system and muscles.
How? With exercise, with a new process
called cupping. Make the blood circulate
with manual massage and with exercise.
Exercise will promote circulation, and give
you a far better color than paint. In the
face and hand toward it as many times as
you can without fatiguing yourself. Put on
a gymnasium suit and exercise with chains.
Try fencing, play tennis, or ball or any
thing you can to heat the blood and bring
it to the surface.

The mechanical massage called cupping
or more technically thermopneum, which
I recommend lightly—now more rapidly
and efficiently. It really builds up the
muscles and strengthens them in an amaz-
ingly short time. The face and the neck
after a few days of filling out after a few
treatments. The eye seems to suck up
the flesh and exercise it as that the blood
circulate freely. It is a better cosmetic
than paint.

Q. How about the old-fashioned manual
massage?

A. That is good, too. If done well and
persistently it will prove most efficacious.
Massage, kneading, stroking, are all to be
recommended.

Q. What shall I use to massage with,
what sort of cream?

A. I should advise you to use the fol-
lowing mixture. It is very nourishing, it
feeds the skin, I may say, and at the same
time it is a beautifier.

Flour 2 grams
Potassium 20 grams
Glycerine 10 grams
Lanolin 120 grams
Essence of rose 10 drops

Don't have your face massaged more
than three times a week and then for only
fifteen or twenty minutes. Prolonged daily
massage is very apt to fatigue the muscles
and produce just the contrary effect to
the one desired.

Q. I am quite willing to follow your ad-
vice and to do all I can for my skin with
massage and cupping, but meanwhile I
want to look as well as possible and to
order to do that I had I must use cos-
metics. Do you disagree of that?

A. As a matter of principle, yes. And
yet, if I imagine the appearance of a
woman—no. I think every woman should
look as well as possible and with my mod-
ern electric India and manual massage
I don't say that she is wrong to
help her appearance with cosmetics, pro-
vided she does it well.

Therefore, instead of preaching against
the use of paint, I use that too long to
use as long as the worst itself I advise
best, and foremost using harmless ones
artificially.

Q. What do you mean by harmless
paints?

A. Harmless paints are those that are
absolutely pure and that contain no prod-
uct that can possibly hurt the skin.
To paint artistically, all exaggeration
should be avoided and the colors that are
nearest to nature are intended should be
water-based. The color of the face, the nature
and skin of the skin should be considered.

English. The art of painting is not understood by
a majority of people. To succeed and appear natural
as one must have a certain artistic apprecia-
tion. Instead of being satisfied to correct
of an imperfect nature, most women employ
their rouge and powder boxes with a desire
to replace nature entirely.

Q. Which paints are the most harmless,
doctor?

A. There are none that are absolutely
harmless. I can only tell you that the
most dangerous white paints are those
that are made up with bismuth or talcum
and the least dangerous reds are those that
have oxids in them. Oxids is a valuable
dye derived from the coal tar products.

After having washed her face thoroughly
or cleaned it by whatever process she may
consider best, she should first spread over
her face a little cold cream and then wipe
it off gently so that it will be perfectly
even. Then powder with rose powder if she
is blonde and with burnt umber if she is
a brunette.

The type of cold cream underneath her
skin and neck, but it should not be suddenly
the powder from being too dry and also pro-
tects the pores of the skin from becoming
clogged.

Q. But suppose, now, that she is too
pale, and would like a little color?

A. To give herself a little color she has
only to pass over her cheeks a brush dipped
in rose. But she must be careful to grade
the color. It should be darker on the cheek
bones and then become paler towards the
chin and neck, but it should not be suddenly
into white.

Q. Could you give me a good prescription
for a rose?

A. Yes, here is one:

White chalk 20 gr. 20 centigs.
White chalk 100 grams
Essence of bergamot 20 drops
Gum tragacanth 100 grams

Q. That's all very well for the face, doc-
tor, but how about the brows and lashes?

A. Yes, of course, if you have none, or if
they are too light or too heavy, you must
paint them. As you are dark, of course,
you should paint them black; but a blonde
woman should use only light brown; a
woman with darker hair, darker brown, etc.

These different colored pencils may be found
in my drug store, but here is a simple and
most excellent mixture if you want to make
your own liquid black:

Polyvinyl Indian ink 50 grams
Rose water 100 grams

First heat the Indian ink and then pour

it into the rose water.

Q. That is good, too. If done well and
persistently it will prove most efficacious.
Massage, kneading, stroking, are all to be
recommended.

Q. What shall I use to massage with,
what sort of cream?

A. I should advise you to use the fol-
lowing mixture. It is very nourishing, it
feeds the skin, I may say, and at the same
time it is a beautifier.

Flour 2 grams
Potassium 20 grams
Glycerine 10 grams
Lanolin 120 grams
Essence of rose 10 drops

Don't have your face massaged more
than three times a week and then for only
fifteen or twenty minutes. Prolonged daily
massage is very apt to fatigue the muscles
and produce just the contrary effect to
the one desired.

Q. I am quite willing to follow your ad-
vice and to do all I can for my skin with
massage and cupping, but meanwhile I
want to look as well as possible and to
order to do that I had I must use cos-
metics. Do you disagree of that?

A. As a matter of principle, yes. And
yet, if I imagine the appearance of a
woman—no. I think every woman should
look as well as possible and with my mod-
ern electric India and manual massage
I don't say that she is wrong to
help her appearance with cosmetics, pro-
vided she does it well.

Therefore, instead of preaching against
the use of paint, I use that too long to
use as long as the worst itself I advise
best, and foremost using harmless ones
artificially.

Q. What do you mean by harmless
paints?

A. Harmless paints are those that are
absolutely pure and that contain no prod-
uct that can possibly hurt the skin.
To paint artistically, all exaggeration
should be avoided and the colors that are
nearest to nature are intended should be
water-based. The color of the face, the nature
and skin of the skin should be considered.

English. The art of painting is not understood by
a majority of people. To succeed and appear natural
as one must have a certain artistic apprecia-
tion. Instead of being satisfied to correct
of an imperfect nature, most women employ
their rouge and powder boxes with a desire
to replace nature entirely.

Q. Which paints are the most harmless,
doctor?

A. There are none that are absolutely
harmless. I can only tell you that the
most dangerous white paints are those
that are made up with bismuth or talcum
and the least dangerous reds are those that
have oxids in them. Oxids is a valuable
dye derived from the coal tar products.

Q. And how about a woman paint
artistically? Can you give me some advice?

A. For the doctor, he must advise her
always to use as little as possible—up.

1—Try this and it will improve your complexion.

2—Take a pole and bend to-ward it five times instead of painting.

To promote circulation and make the lips cherry colored without the use of vermilion.

Kneading the face to make the color even and to get away with use of powder.

Blend like this and your blood will supply you with a healthy color.

If you fence you will not have to rouge.

circle of the eyes in the bottom of the
cheeks and over the ears. Let this dry
and dust it off. Then powder with pink or
yellowish powder, pink for a blonde skin
and yellow for a brunette.

Q. Now what should one use for the eye-
brows and lashes with this liquid make-
up?

A. First the following cosmetic slightly,
rub it on a little brush and then pass it
over your brows and lashes:

White wax 50 grams
Lard oil 50 gr. 50 centigs.
Lamp black 50 gr. 50 centigs.

Now another method of making up is with
what we call grease paints. For any part
I prefer the liquid paints to the grease
paints, which are applied with a sponge
or a fine sponge or bit of absorbent
cotton, dip it in the following mixture:

Sub-strate of blanch 100 grams
Glycerine 100 grams
Essence of French geranium 10 drops
Essence of verbena 10 drops
Spread this evenly over the face, neck
and, if you are desirous, over the shoul-
ders and arms. Of course, do not touch the
eyes and over. Let it dry thoroughly and
when every trace of liquid has disappeared
brush it off with a silk handkerchief of
fine brush.

After this use a little of the following
liquid rouge:

Rose water 50 grams
Glycerine 50 grams
Essence of verbena 5 drops
Essence of rose 5 drops

Put this in a bottle with water, so that it
will be a delicate pink and then use
it with a sponge or bit of cotton spread it
from the nose to the ear and from the
forehead to the chin.

After this use a little of the following
liquid rouge:

Rose water 50 grams
Glycerine 50 grams
Essence of verbena 5 drops
Essence of rose 5 drops

Put this in a bottle with water, so that it
will be a delicate pink and then use
it with a sponge or bit of cotton spread it
from the nose to the ear and from the
forehead to the chin.

After this use a little of the following
liquid rouge:

Rose water 50 grams
Glycerine 50 grams
Essence of verbena 5 drops
Essence of rose 5 drops

Put this in a bottle with water, so that it
will be a delicate pink and then use
it with a sponge or bit of cotton spread it
from the nose to the ear and from the
forehead to the chin.

After this use a little of the following
liquid rouge:

Rose water 50 grams
Glycerine 50 grams
Essence of verbena 5 drops
Essence of rose 5 drops

Put this in a bottle with water, so that it
will be a delicate pink and then use
it with a sponge or bit of cotton spread it
from the nose to the ear and from the
forehead to the chin.

After this use a little of the following
liquid rouge:

Rose water 50 grams
Glycerine 50 grams
Essence of verbena 5 drops
Essence of rose 5 drops

after having cleaned it thoroughly, a good
coating of cold cream. This is both for
protection and in order to make the powder
and paint stick on. Once bitten is also good.
Then wipe this off and put on grease paint,
white, yellow or pink, according to the
type you are—blonde, brunette or chestnut.
After this put on your rouge, being care-
ful to grade it and so, stop it suddenly
so as many actresses do. Here is a good
pure rouge:

Caroline 4 grams
Cerulean 5 grams
Yellow 20 grams
Essence of verbena 5 drops

Now powder smoothly and then proceed
to do your eyes, which of course are a most
important matter. On the lids, near the
ashes, put blue, the blue that may be used
to paint in white—this blue:

Yellow 60 grams
Cerulean 10 grams
1-10 cc blue 60 grams
Essence of bergamot 30 drops

With this you may draw a line at the
corners of the eyes to enlarge them. You
may also paint in white with this same
blue. Then with a little brush put on the
lashes and brows the following black:

Thick black 50 grams
Cerulean 10 grams
Vaseline 25 grams
Essence of bergamot 5 drops

With this you may also lighten and
even change the shape of the eyebrows. A
touch of dry red in the corner of each eye
makes a good effect; it brightens up the
eyes. Put a little in the nostrils and a
little on the sides of the nose, to make them
look like shells, and you are done.

But don't make a mistake and use this
make-up in the street. Let me repeat that
the less you use, the more you use, the
better the better you will look. Just a
small paint except where it is absolutely
necessary—the least touch in the eyebrows
and the least touch in the eyebrows.

I beg you to try at the same time
exercise and massage and the cupping I
have already spoken of.

Try manual massage with the cream I
have given you and then use the cupping
to strengthen, rub the face gently with
a bit of flannel dipped in the following
liquid rose water with water half and half.

Lavender water 100 grams
Vaseline 100 grams
Essence of verbena 100 grams
Essence of bergamot 2 gr. 50 centigs.

Q. Now what should I do to get my skin
in good, healthy condition?

A. It should be massaged with the skin
food I have given you every day for a
quarter of an hour. After that bath it
with cold water and then rub it thoroughly
with the lotion. I have just given you, only
use it pure. Watch carefully that the num-
ber of your pores do not become too big and
as soon as there is a suspicion of that,
then use the rest of the lotion every day
thrust if you wish it to remain young,
rounded, pretty.

And now a thing more. I have told you
how to paint, if you will, but what is
really important is how to use it. It is
Q. O. H. I never pay any attention to that,
I just wash it off with water. What do you
mean?

A. I mean that all cosmetics, no matter
whether they are dry or are in liquid,
oil or anything and even poisoning the
skin if they are not properly taken care of.
Always use some kind of grease to take
off any makeup. Never use water. But
use a cold cream or cream to wash it off
then wipe the face with a fine cloth till
all trace of paint has disappeared. Then
use a bit of absorbent cotton to take the
lotion and bathe the face thor-
oughly, using the lotion dry without ex-
posing it.

Now water 50 grams
Borax of soda 50 grams
Glycerine 50 grams
Essence of verbena 5 drops

Now one word more. As it is a fact that
the best and least harmful of paints are
bad for the skin. Indeed to write of
it, I advise any one who wishes to
use no painting at all, to use only
go to bed. Leave it on the face.

Q. I have heard that the best of all
is to use no paint at all. Is that true?

A. Yes, it is true. The best of all
is to use no paint at all. Is that true?

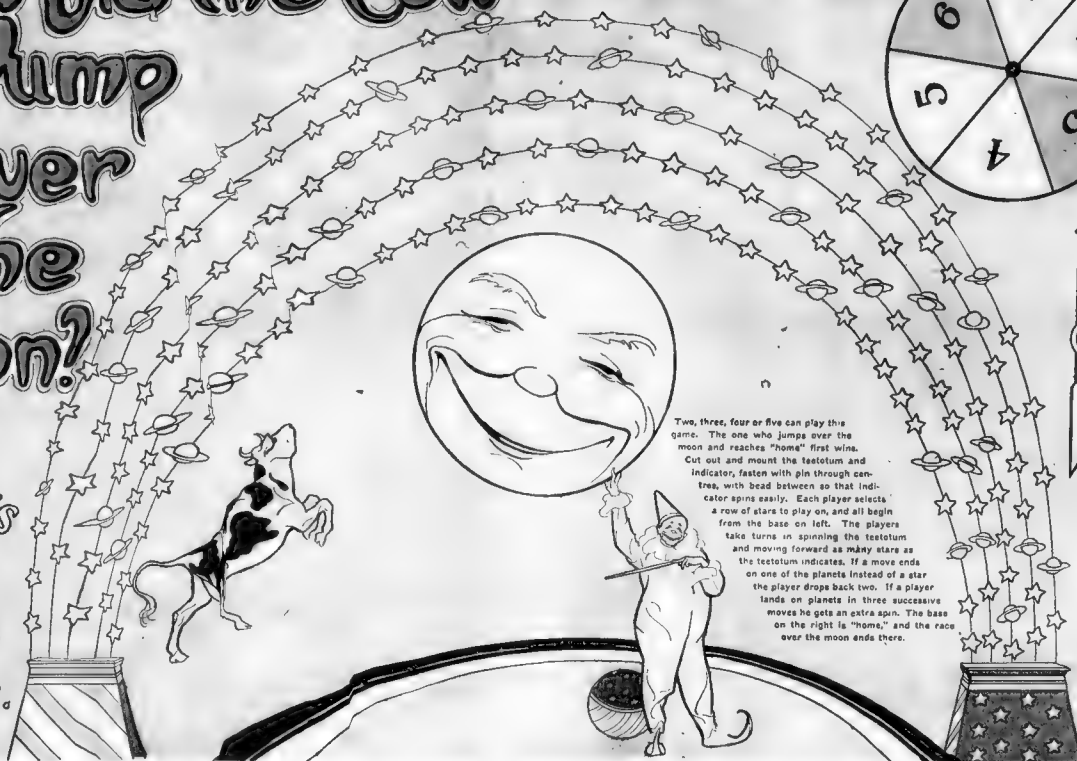

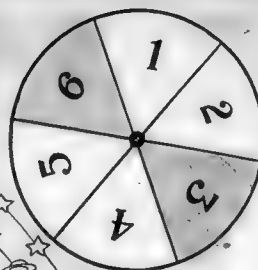

Q. I have heard that the best of all
is to use no paint at all. Is that true?

A. Yes, it is true. The best of all
is to use no paint at all. Is that true?

How Did the Cow Jump Over the Moon?

Sam Loyd's
New
Puzzle
Game.

Copyrighted, 1904, by the American Journal-Examiner.

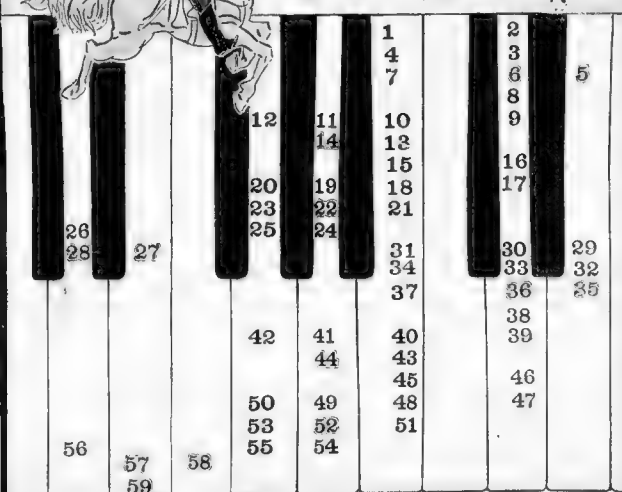

Two, three, four or five can play the game. The one who jumps over the moon and reaches "home" first wins. Cut out and mount the testotum and indicator, faster with pin through centers, with bead between so that indicator spins easily. Each player selects a row of stars to play on, and all begin from the base on left. The players take turns in spinning the testotum and moving forward as many stars as the testotum indicates. If a move ends on one of the planets instead of a star the player drops back two. If a player lands on planets in three successive moves he gets an extra spin. The base on the right is "home," and the race over the moon ends there.

HOW TO PLAY THE JAPANESE WAR SONG

WITHOUT KNOWING MUSIC

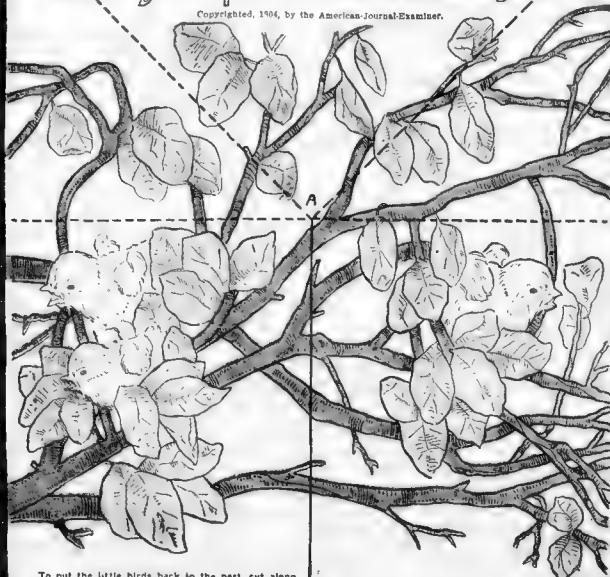

Copyrighted, 1904, by the American Journal-Examiner.

About half way along the keyboard of your piano at home you will find a key just like the one above on which the figure 1 is printed. Strike the key softly. Then strike the key corresponding to the one above on which the figure 2 is printed, and so on from 1 to 59. The notes surrounded by borders are twice as long as the others.

These Three Birds Fell out of the Nest Can you put them back again?

Copyrighted, 1904, by the American Journal-Examiner.

To put the little birds back in the nest, cut along heavy line A B. Then fold along other dotted lines and watch what happens.

EDITORIAL SECTION

Intelligent Organization Means Power.

Foley

AS IT IS NOW.

The trusts that now rob the country are thoroughly organized, politically and financially. The workmen will revolutionize trusts and have them at their mercy when THEY shall be thoroughly organized politically.

THE POWER of Niagara Falls is simply the power of organization and UNION.

The huge torrent that could sweep the greatest ocean vessel to destruction, crush it like an eggshell, is made up of millions of little streams that a child could stop with its hand.

The ordinary American citizen, and especially the ordinary American workman, might spend a few hours very profitably at the brink of Niagara, reflecting on his own frolicsomeness and on the causes of the great cataract's power. Niagara is powerful in the first place because it unites in one stream and in one direction the energies of millions of little streams trickling into lakes and rivers far away.

IT IS POWERFUL, ESPECIALLY, BECAUSE IT CONCENTRATES ITS ENERGIES AT ONE POINT.

If the falls were a hundred thousand times as wide as they are the same amount of water would be there, the same amount of water would go over the falls, BUT THERE WOULD BE NO POWER.

The spreading out of the stream would weaken it; it would lose the force to which concentration is absolutely essential.

Of course everybody knows that the actual amount of water at the falls of Niagara is a very small part of the total water supply of the United States.

Niagara is powerful because of its organization; in that way it is like the country's ORGANIZED FINANCIAL TRUST INTERESTS.

The Trust is a combination of many separate businesses united in one, as Niagara is a combination of separate streams.

The Trust POWER is a combination of many trusts, which means thousands of different business enterprises.

And these businesses, united in one powerful central Trust organization, constitute the greatest force in the United States at present.

Like Niagara, the powers of the Trusts are united, and like Niagara, they concentrate their efforts in one direction and at one spot. They do not spread out and waste their energies; they work in a narrow channel, with terrific force.

It is a generally accepted fact in the United States that the people of the country, who are supposed to rule it, in reality rule it no longer. Their laws are made or ignored by the Trusts. Their officials are selected or controlled by them. The people themselves have actually, at the most, an ineffective and protesting voice in the management of their own affairs.

This is due to the fact that there is no real political organization or concentration among the people. They live as isolated as individuals, working each in his own direction. There is no concentration of effort, and such as there is, is limited to small individual or class interests; it is not aimed at any control of the nation's affairs.

The labor unions especially are missing a great opportunity in abstaining from united action as regards the government of the country.

They have realized the power of organization, and they have used that power with admirable skill in certain limited directions. They have secured better wages and shorter hours in many cases. They have rendered an important service to the nation by organizing to bring about the DISTRIBUTION of wealth, which is at least as important as the PRODUCTION of wealth. Without the unions, that enforce good wages, the heads of the Trusts would be the richer by hundreds of millions annually, and the trust

AS IT MIGHT AND WILL BE.

question would be even more serious than it is to-day.

Mr. Oppen's picture at the top of this page ought to make a good many labor union men think seriously.

Is there anything that the Trusts are afraid of, except honest enforcement of anti-trust laws?

IS THERE ANY way of obtaining and ENFORCING SUCH LAWS, EXCEPT THROUGH UNITED POLITICAL ACTION?

It is said by some labor leaders that the do not want to take the unions into politics. That is a wise statement. Unions should do their work as unions, and leave politics outside of their discussions on wages, hours, etc.

On the other hand, there is every reason why the men organized in labor unions should also be organized IN POLITICAL UNIONS.

The workmen know that their greatest enemy is the trust, an impersonal power which they cannot reach, which bribes legislation, and which holds labor at its mercy.

The Steel Trust very recently has arbitrarily cut off some twenty to thirty millions annually from the wages of its men. This it does in the effort to pay interest on hundreds of millions of absolutely fraudulent stock. What is to prevent that Steel Trust from cutting off twenty millions more annually, when it chooses to do so?

We are not trying to tell the union men that they shall join this party, or the other. But we do tell them that all of the people of the country, and the workmen especially, whose interests are identical, ought to work TOGETHER in politics.

The steel workers of Pennsylvania and the miners of

Pennsylvania are convinced at this moment that the action of the Steel Trust, in arbitrarily reducing wages, is irreparable and unjust.

PENNSYLVANIA IS AN ABSOLUTELY REPUBLICAN STATE, BUT IT WOULD GO DEMOCRATIC IF THE STEEL WORKERS AND MINERS WOULD HOLD TOGETHER POLITICALLY.

Everybody knows that the trusts would be inexpressibly terrified if they would see the end of their arbitrary power, if Pennsylvania should change from Republican to Democratic.

But the Steel Trust and the other trusts do not worry at all about that.

They know that the people are united in their hatred of the Trusts at this moment; they also know THAT THEY WILL BE DIVIDED POLITICALLY WHEN VOTING TIME COMES.

Among the labor leaders there are some of small calibre who object, for personal reasons, to united political action among workers.

These small leaders are supposed to possess a certain political influence which gives them power. They fear that political organization among the workmen might diminish the leaders' individual political importance.

But the great majority of union leaders are conscientious men, eager to improve National conditions and unselfish in their activity. These leaders should encourage united political action against the Trusts.

And the individual workmen themselves, far more important than all leaders and all politicians, should think over this question of political organization and act upon it.

Until they do, things will remain as they are in the first of these two pictures, monopoly defying law, and the workman unorganized politically, powerless to protect himself against trust extortion.

by Ella Wheeler Wilcox.

"But they watched the blooming lid,
So they did?"

Press and Pulpit United by Efforts of William Randolph Hearst.

Eminent Churchmen Tell of the Powerful Aid the Hearst Papers Have Rendered Christianity, the Church and the American Home and Point out Benevolent and Humanitarian Works Accomplished by Them--

Mr. Hearst's Courageous Stand in Behalf of the People.

By Bishop Samuel Fallows, of Illinois.

THE time once was when the pulpit exercised nearly all the functions which are now pre-eminently given to the press.

The art of printing revolutionized the whole world of thought and action. But while the pulpit has been shorn of much of its former power and direct influence, the press in many important points has become its faithful ally.

It has brought together church leaders of different religious faiths to express, through its columns, their weighty opinions on problems which affect the deepest social and religious interests of the people.

It has also associated with these leaders eminent laymen who have given thoughtful and wise utterances on the practical subjects with which they are thoroughly familiar.

This coalition of pulpit and press has been of the greatest benefit to the church at large and to human society which the church is endeavoring to leaven with Christian principles.

AND WHILE THERE NEED BE NO DISPARAGEMENT OF OTHER INFLUENTIAL JOURNALS WHICH HAVE RENDERED FAITHFUL SERVICE IN THE DIRECTION ABOVE MENTIONED, THE NEWSPAPERS OWNED AND EDITED BY W. R. HEARST HAVE BEEN MARKEDLY CONSPICUOUS.

Let us look back a little and learn how this most important coalition of pulpit and press was brought about.

Untold good was accomplished by Mr. Hearst in the crusade he carried on against divorce.

Champion of American Home.

Many pages of his newspapers were devoted to the symposium on the evils of divorce, to which Cardinals, Archbishops and Bishops of the Roman Catholic church, with representative Bishops and clergymen of the various Protestant churches, besides many of the most influential judges, lawyers and other leaders of public opinion, as well as notable women of the country, contributed powerful papers, thus placing before a vast audience of readers the true facts concerning a terrible menace to home life.

THIS MARKED A REAL JOURNALISTIC EPOCH, AND I PRAY THAT THE PUBLICITY GIVEN THE DIVORCE EVIL BY MR. HEARST THROUGH HIS NEWSPAPERS IN DIFFERENT CITIES OF THE COUNTRY MAY BRING ABOUT THE GREATLY NEEDED CONSTITUTIONAL AMENDMENT FOR A UNIFORM DIVORCE LAW. FOR DIVORCE IS ALMOST AS GREAT AN EVIL AS POLYGAMY OR MORMONISM.

The symposium on the drink evil, to which Mr. Hearst gave up the editorial pages of his various newspapers and which reflected the views of more than thirty eminent persons of the rank and character of those who contributed the articles on divorce, was perhaps the ablest ever presented to the American people and undoubtedly saved many thousands from ruin by drink. The great educational work in the interest of temperance has also been carried on in powerful editorials and cartoons for many months past.

The series of papers on the relations of capital and labor inaugurated by Bishop Henry C. Potter, of New York, for Mr. Hearst's papers, brought forth the best thought of the great employers of labor and of the men who lead the forces of the working world.

Sixty writers were enlisted in this remarkable series.

To these great Christian educational works were added the symposium on success, to the elucidation of which the most prominent churchmen, educators, business men, editors, railroad presidents and other successful men in various walks of life throughout the country lent their efforts; the symposium on the negro problem, dealt with by more than fifty of the most earnest thinkers North and South, and the Ideal Sunday symposium, which has proved of immense value in educating people of all nationalities in the proper observance of the Sabbath.

W. R. Hearst's Papers Have Helped Christ.

Mr. Hearst did immense service to the country in organizing the powerful National Anti-Polygamy League, with its 250,000 active members, consisting of churchmen of all denominations, and the officers and members of hundreds of Christian women's organizations, who collected and forwarded to Congress 5,000,000 signatures and brought about the unseating of Roberts, of Utah, the Polygamist. The National Anti-Polygamy League have also been very active in bringing pressure to bear upon the United States Senate to prevent Smoot from retaining a member of that august body.

They are also hard at work with our national legislators to secure a constitutional amendment which will bring the prosecution for polygamy into the Federal Courts, which cannot be influenced by the Mormon Church, as appears to be the case with the State Courts of Utah.

The Christian people should not soon forget that notable petition to the Queens of Europe of more than 250,000 American women, wives of the most eminent men throughout the nation, and the entire boards of officers of practically all the Christian women's organizations of America, headed by Mrs. McKinley and Mrs. Garfield, the widows of our martyred Presidents, against the cruelties perpetrated upon the Macedonians by the Turks.

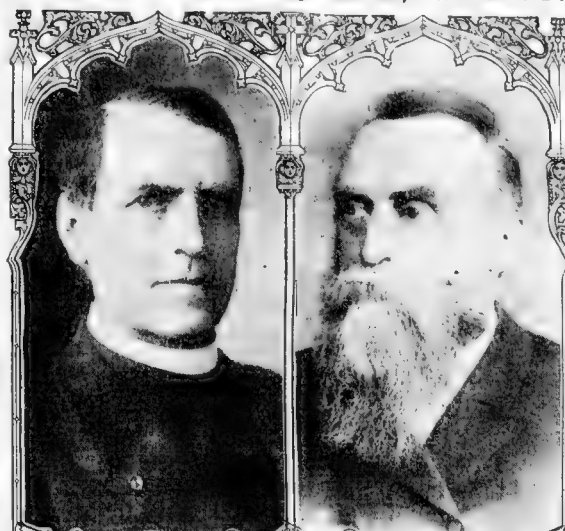

Almost immediately after this protest was made the sanguinary persecutions ceased.

I am but reflecting the sentiment of a large number of my clerical brethren in this expressing my appreciation of the good work done for Christianity and good citizenship by Mr. Hearst's various papers along the lines I have enumerated.

The benevolent movements championed successfully by them, such as the raising of a fund of more than \$100,000 for a memorial shortly to be erected in New York City in memory of the heroes who died on the battlefield of Maine; the sending of thousands of dollars and trainloads of provisions to the suffering people of Jacksonville and Galveston; the bringing together through a great bazaar of a fund of more than \$50,000 for the erection of a home for the orphans made by the Galveston disaster; the sending of more than \$35,000 to the sufferers through the Kishineff massacre; the providing of Christmas joy for more than 100,000 of New York's poor last Christmas, and many other kindred Christian movements, are all worthy of the highest commendation.

Thus the cause of morality, humanity, social progress and Christianity has been greatly advanced by these, as well as many other, successful efforts of the W. R. Hearst papers.

To what better purpose can money, genius and laudable ambition be directed? I sincerely hope that the Hearst papers will ever continue as the ally of the Christian Churches of the nation, for with press and pulpit working in unison the cause of Christianity cannot help but advance with giant strides.

Bishop Samuel Fallows

RIGHT REVEREND SAMUEL FALLOWS, D. D., LL. D., presiding bishop of the Episcopal Church and famous humanitarian, educator, orator and author, is one of the most eminent churchmen in the United States. He represents as few men in the ministry do the later day movement toward interdenominational action in all things, toward ignoring sectarian lines in every matter that affects public interest and the people at large. During the World's Fair Bishop Fallows was Chairman of the General Committee on Educational Congresses.

Bishop Willard F. Mallalieu

THE Primate of the Methodist House of Bishops is William F. Mallalieu. The Methodist House of Bishops consists of sixteen members, who have the authority over the whole Church in this country. These men have spiritual control over more than 17,000 clergy and several million souls. In this House of Bishops Bishop Mallalieu takes precedence over the others. He has done herculean service for the people and is ever ready to speak the truth plainly no matter how powerful those whom it might displease.

There are as many millions, probably more, gathered in the Sunday schools of the United States which they share. When there are many millions more of the brightest and best of the young men and women of our country who are members of Epworth Leagues, Christian Endeavor Societies and other similar organizations, and with all these classes the clergymen come in close and constant contact.

Then, in nearly all the churches, there are the many weekly social meetings of which, for the most part, the clergy have charge, so that the work and influence of the pulpit have an exceedingly wide range.

This is one of the greatest problems that confronts the civilization of the first decade of the twentieth century, viz., Is it possible to find a way to effect a coalition between the Press and the Pulpit?

Can the two supreme powers be made to combine for the benefit of our eighty millions of people? Is there any common ground on which they may stand?

Can they not be made the vehicles of their vast and ever increasing possibilities for the supreme good of our immense population?

The problem has, in part at least, received a practical solution by the course pursued by the many daily papers of which Hon. William Randolph Hearst is the sole master.

These papers are established in nearly every one of the greatest cities of the country, and extend from Boston to San Francisco. The circulation of these papers at the present time exceeds more than two million copies each day. Then, in addition to this, we have many other daily papers using Hearst features, covering practically the whole country, with a daily circulation of more than five million copies; and it may be assumed that each copy has at least two readers, so that it is manifest that Mr. Hearst's own papers and these other papers are read each day by from ten to fifteen millions of people, and many of these people are among the most intelligent and influential.

No more earnest consideration and persistent antagonism has been developed against one of the supreme outrages of recent times than by the W. R. Hearst papers. What is the outrage?

CERTAINLY IT IS THE COMBINATION OF THE "COAL BARONS" A YEAR AND A HALF AGO, BY WHICH MANY MILLIONS OF PEOPLE WERE MADE TO PAY A MOST EXORBITANT PRICE FOR ONE OF THE PRIME NECESSITIES OF CIVILIZED LIFE, AND NOT A FEW OF THESE MILLIONS SHIVERED AND SUFFERED THROUGH THE DREARY MONTHS OF A SEVERE NORTHERN WINTER, AND DOUBTLESS THOUSANDS WERE HURRIED TO THEIR GRAVES AS THE RESULT OF THE HARDSHIPS AND PRIVATIONS THEY WERE COMPELLED TO ENDURE.

HERE CERTAINLY WAS A CONCRETE CASE WHERE PRESS AND PULPIT MIGHT WELL COMBINE IN THE INTERESTS OF AN ABUSED AND OUTRAGED PEOPLE AND IT IS A SOURCE OF WIDESPREAD, IF NOT UNIVERSAL, SATISFACTION, THAT AT LAST THERE HAS BEEN REACHED A DECISION IN MR. HEARST'S SUIT BY THE HIGHEST AUTHORITY OF THE LAND, THAT IT IS TO BE HOPED, WILL BRING THE MISCREANTS TO JUSTICE.

FURTHERMORE, THE HEARST PAPERS AND THE PULPIT HAVE SHOULDered to shoulder in creating and making effective the National Anti-Polygamy League, and, in some measure, staying this foul, degrading tide of corruption that is alike destructive to moral excellence in personal character, and a force inimical to the public morals.

Then, again, the Hearst papers and the pulpit have done most excellent service in the crusade against the prevailing tendency to seek rich men through immoral infelicities by means of easily procured divorce.

Another great evil of the present time is intemperance. The beverage use of intoxicants is the white man's curse. When the Press and the Pulpit stand together, as in the case of the English-speaking people, for what might not these people accomplish if it were not for this smoke and waste?

Prisons, poorhouses and asylums are crowded with the victims of the drink habit. Sad to say, this is not the worst of this terrible crime. The sex is debased, the breaking of the ties of wives, and mothers and children, and loved ones, presents a spectacle our hearts are loath to witness, and which angels bend with tenderest concern and deepest sorrow.

If any human interest should command the attention of the Press and the Pulpit it is this. The recent symposium in the W. R. Hearst papers, to which more than thirty eminent men contributed articles, brought this subject distinctly and emphatically before many millions of people, not a few of whom rarely if ever attend church, and more rarely listen to the sermon. Every friend of the temperance reform, every patriot and philanthropist ought to thank God for such a symposium.

And why may not this effort be repeated? Why may not the Pulpit take fresh courage when such splendid reinforcement is freely offered for the accomplishment of its greatest humanitarian work?

When the Press and the Pulpit stand together, as in the case of the English-speaking people, when the Press shall attain a still higher plane of intellectual and moral excellence, when the Pulpit shall become more practical and not less spiritual, and shall dare to do its full duty and grapple with all vital questions which concern the temporal as well as eternal well-being of humanity, then there will be a coalition of vital forces which will crush out many an evil and bring boundless blessings to millions yet unborn.

May God speed the day!

W. F. Mallalieu

\$ \$ HOW I GOT RICH BY JOHN D. ROCKEFELLER \$ \$

Richest Man in the World Gives Young Men in Bible Class History of Youth

I was born in a poor family in the town of Westbury, Long Island, N. Y. I was the youngest of six children. My father was a farmer and my mother a homemaker. I was educated in the common schools of my native town. I was a very poor student and was often called a "dunce." I was a very poor student and was often called a "dunce." I was a very poor student and was often called a "dunce."

to "Dancers' Lane," and it will be re-
ported that the stock company at the Col-
umbia was particularly successful in
presentation. The handsome awards
which last fall will be duplicated in
this coming production, and all details of
performance will be in keeping with the
instructions of the author.

at the Park, has experienced a constantly growing popularity. Tomorrow night guide books to the London Musical Association will be presented at the theatre, and on Thursday night will celebrate the twenty-fifth anniversary of the production of the first of the productions of the original plays, ornamented with a portrait of Ladou, we are distributed as souvenirs.

MAJESTIC THEATRE.

Another season of fun begins at the Majestic Theatre, with the performance of George Robey and his company in a new edition of the musical comedy, "The Merry Widow."

play *1937*. Mr. Hines has had a very successful career with the company, managing the Majestic here and touring elsewhere in his ability to capture the fancy of the audience. He will be in charge of the company for an engagement of two weeks.

The supporting company is a large one, comprising fifty people, and the play is to be presented with a new production. It will look forward to two weeks of pleasure at the Majestic.

KEITH'S THEATRE.

Robert Hilliard will be the star attraction at Keith's Theatre during the coming week. The play is written by the author of *1937*, who is a well-known dramatist.

[illegible][illegible]

Their Mr. Robert Deesse will play the title role, and a carefully selected company will appear in his support.

CASTLE SQUARE THEATRE.

The remarkable popularity of Clyde Fitch's "Lovers' Lane," now produced at the Castle Square Theatre, has led the management of this playhouse to announce this week's attraction. Few of this season's plays have met with greater favor from Boston audiences than has extended its inclusion in the programme. The

Gladstone "Lost Old Irish" and the "Fighting Dutchman" are in it, and so is John R. Hayne's one of those eccentric Irish character parts that he has made his own particular property. Mayna Gehrbue, the prettiest actress; Parlier's troupe of performers; and the following cast:

Kingmaker first; Hayne and Wynne, remarkably able dancers; Belle Harrington, contralto vocalist; Duran and Al, horn players; and a dozen actors, a singing club swinger, and a dozen more actors included in the programme. The

Irish Patriotic Play, "Robert Emmet," Will Please Lovers of the Green Isle at Grand Opera House—"Mother Goose" and "Mrs. Wiggs" Still Draw Great Crowds.

League troupe is to present a new skit, called "A War Session"

PALACE THEATRE.

Mlle Tytène, novelty dancer, and the pipe Comedy Four, besides which Mlle Iman a "Trous Pany Ballet" will appear

One of the most popular organizations of the city attracts some 1,000, W. W. Jones, Jr., president, has suggested, is an annual fair to be attractive for the coming year. The fair, Jones says, will be a "compensation thing for the people, who will pre-

NICKELODEON.

Had Park, the featherweight wren will be the principal feature in the card party at the Nickelodeon the current week. The wren will come up to the post during his engagement and already several important bouts are booked. His feature will be to fight with a champion from the States. A New York champion will be his opponent. The fight will be a five round affair. There will be a lot of interest in the fight.

[illegible]

LYCEUM THEATRE.

Frank B. Caca's Thoroughbred Bur-
rangers open their engagement at the
Lyceum Theatre tonight. The Lyceum
is one of the largest and best equipped
companies on the road. The bill includes
two laughable burlesques, and the com-
pany includes well-known people as Polly
and Terrell, Arabella, Hattie Wadsworth,
Joan Flynn, Aramby and Evans, Miss La
Folys, contortionists; Russell and O'Sell,
Queen of Spain's song, which he made
up in "1912."

Another strong attraction in the bill
is George Gardner and Joseph
Dennis, who sing the comedy sketches. Of
features are Inhoff, Cuna and Correll,
Talkative Miss Norton, Carl W. Sander
the pianist, Hicks and Raymond, in-
cluding "The Musical Bells and the El-
kinstone."

The programme at Boston Music
tonight will be one of the best that

CHORUS GIRL WHO GETS BU WEEK GIVES FRIEND A

**Who Foots the Bill, and That
Makes It Easy.**

Special to Boston Sunday American.
New York, April 9.—First class in mental arithmetic, stand up.

"If a chorus girl draws \$18 per week and gives a birthday party that costs \$3,000 in a swell New York apartment house, what is the answer?"

What is up?
(sn't) guess?
Anna Fitzhugh, who sparkles in the front row of the "board of the" chorus, can tell you.
"Have a wealthy uncle who dotes on you," is her answer.
Right the first time, Anna. Go to the head of the class.
Just to show that it could be done, Miss Fitzhugh went ahead and gave the birthday party.

mother, who lives out on West Adams street, in Chicago, was there. Mother's name is Mrs. M. E. Childe, sister, who is Mrs. M. N. McNeil, also lived out on West Adams street, in Chicago. The Chicago chopmen, and all around the table in the Ansonia apartment building were the stars and managers and clowns of the "Wizard of Oz" in the golden crowd that came to make life an endless dream for Miss Fitzhugh—all except uncle, he said. There, but he did get the last after awhile. It all came to \$5,000, but Miss Fitzhugh

PLOT TO BREAK OUT OF JAIL DEFEATED **TO TOUR IN AUTO DURING HONEYMOON**

Large Sheath Knife Is Found On One Prisoner Who Is Searched.

Battleboro, Vt., April 9.—A plot for a wholesale escape from the Newfane prison has been thus far frustrated by the jailer, Frank Davis.

The scheme was to cut off the rivets of

...from the corridor and to get into the corridor by prying the coils apart. Four of the rivets had been already severed, but they were replaced as soon as discovered. The other of the rivets was found severed by the FBI men after they had searched yesterday and a large sheath of steel, 1 1/2 inches thick, 10 inches long and 1 1/2 inches wide, was found in the corridor. It was cut the rivets with the knife. Four of the rivets were found severed, and all would have undoubtedly been severed if they had not been replaced. The FBI men would have undoubtedly been severed if they had not been replaced. The FBI men would have undoubtedly been severed if they had not been replaced.

TURTLE CAUSED A FLOOD
Culdes City, April 9.—Frank Kincaid, a farmer residing north of this village, notified that something atrocious had happened in his place. He went through his farm. Thinking what it would be, he found that a turtle had drifted down lodged under the levee, and had caused the water to rise. He went down the water to overflow and result in a flood.

After attempting many times to get the turtle out, he was unable to do so. He then brought a piece of wood, was about to cut it in two, when the turtle became enraged between two rocks, and a great deal of the ice was unable to get out.

been arranged for presentation at this house this season. The bill will be headed by the Russell Brothers, supported by their company, in George M. Cohan's bright comedy sketch, "A Romance of New Jersey." This will be followed by the appearance of these people as Mrs. Norton, their stage manager, who is another leading feature of tonight's bill, and still another will be Gardner and Madden in "Too Many Darlings." Other features of the bill include "Cousin Gus," George, Marie-Louise, Maudie, in two of modern music, the Musical Melodrama and the Edison kineograph in moving pictures.

of the musical and Boston Theatre is promised for tonight. The most important announcement is the engagement of James Houghton, known to the man with the green gloves. It is needless to say that he has a new budget of songs, parodies and up-to-date stories, and will keep his auditors in a roar of merriment all through his act.

Other features of the programme are Harpber, Desmond and Bailey, who are described as the "divinest real comers on stage", Hannon and Harris, in their sketch entitled "The Unknown and Mischiefous Kid the Way to a striking novelty is provided by the wild and hilarious first act, and the second act, which is a

the "dainty singing" of Marie, a Christian and a Jew, in "The Jew of Malta." The latest addition to the list is "The Sweet Housewife," and the latest novelty in the line of moving pictures.

DRAMATIC NOTES.

Major K. Smith of the grand opera or pantomime, now appearing at the Boston, is a great lover of light opera and musical comedy songs, and never misses an opportunity of indulging in them. Last evening she ordered a box at the theatre and will present Lind's character performance in "Dolly Madge," and Thursday evening she will perform "Daddy from Paris," at the Theatre.

For the week beginning Monday, April 18, the "Little Square management" and

announce Marie Thérèse's dramatic debut in the rôle of Cleopatra. This being the first stage production in Boston of the famous work which has been world wide interest by the most dramatic of Richard Wagner. For this production a special engagement has been made with Blanche Stoddard, late of the Nance O'Neil Company, to appear as Antony.

Members of the Suburban Press Association for this purpose, will enjoy the hospitality of Keith's Theatre to-morrow evening, after their annual banquet.

UP \$18 A

day presents she received.

Pearl and diamond collar that cost \$8,000, gift of an uncle.

Diamond bow that cost \$1,000 and an emerald ring that cost \$475, gift of Mrs. M. E. Childs, mother of Miss Fitzgerald.

Diamond brooch that cost \$800, gift of F. L. Lehigh, brother-in-law.

Trinkets and jewelry that she had of Shub, gift of Mrs. F. L. Lehigh, Miss Pittsburgh's sister.

Diamond bracelet of Indian design, representing

A pair of pearl and gold opera glasses, the gift of "The Wizard of the West" who gives that \$500, Miss Fitzhugh has announced her engagement to David C. Montgomery, the comedian who plays the Tin Woodman in the Hamlin Mitchell extravaganza.

A simultaneous announcement is to the effect that the engagement of Fred Stone, the Keweenawer, to Miss Clara Morton, has been broken on account of irreconcilable

religious differences. Stone is Montgomery's co-star and life long friend.

CLARENCE: *Wrote it. Clarence*

**PUPILS WHIPPED;
TEACHER GOES INSANE**

Princeton, Ind., April 9.—Miss Bertha Montgomery, a popular teacher in the public schools of Greensburg, is hopelessly insane on account of having stood by and watched the principal of the school whip thirty of her pupils.

**MIXES UP WITH A
TROLLEY AND AUTO**
Frightened Horse Runs Away

and Driver Falls Out and Is Seriously Injured.

Ludlow, April 9.—James Irvine was driven toward Indian Orchard when an automobile coming along frightened the horse and shied in such a manner as to cause the horse to be struck and thrown by an electric car, which was coming along unnoticed by the driver.

and started to run when the wheel caught in the track and the wagon was overturned with the driver underneath. Irvine was removed to his home and Dr. Harrington immediately called. He found he was suffering from internal injuries. He is 67 years old, and the accident will compel him to keep within doors for a number of days.

l White, who died in Cedarville, has been shipped to Zion City for burial, on a certificate of death signed by Coroner W. A. Clemons. David Tarbox, another follower of Dodd, from Cedarville, accompanied the body. During the early part of his illness, White placed what money he had in the Cedarville Bank in the hands of David Tarbox, with instructions as to what might be necessary for his funeral expenses in the case of death, and turn the remainder over to his wife, Mrs. J. H. White, which was made while he was still a bedridden man, and is in the hands of Lawyer Flood, provided that all his property, consisting of his house in Cedarville and in Indiana, shall go to Zion City.

C. L. TUCKER ARRESTED FOR THE MURDER OF MABEL PAGE

CHARLES L. TUCKER, CHARGED WITH THE MURDER OF MABEL PAGE.

Man First Suspected in the Weston Tragedy Is Taken Into Custody at His Auburndale Home on Warrant Formally Charging Him with the Crime.

TRINKET OF THE SLAIN WOMAN IN HIS ROOM!
SEVERAL BLOOD STAINS FOUND ON HIS TROUSERS!

"You Can't Convict Me," He Defiantly Declares to Officers--To His Mother He Said: "They Have Nothing on Me; Cheer Up!"--In Jail at West Newton--Arraignment To-morrow.

A WITNESS TO PROVE THAT TUCKER WAS DRIVEN TO THE PAGE HOME ON THE DAY OF THE MURDER.

"WE HAVE THE RIGHT MAN; HE CAN'T ESCAPE US," SAYS CHIEF SHAW

THE MABEL PAGE MURDER MYSTERY HAS BEEN SOLVED. CHARLES L. TUCKER, AGED TWENTY-FIVE YEARS, A NE'ER-DO-WELL OF AUBURNDALE, WAS ARRESTED AT 6:25 O'CLOCK LAST NIGHT, CHARGED WITH THE CRIME. A TRINKET BELONGING TO MABEL PAGE WAS FOUND IN HIS ROOM. BLOOD STAINS WERE FOUND ON A PAIR OF TROUSERS IN HIS ROOM. THE MOTIVE FOR THE CRIME, THE POLICE SAY, WAS ROBBERY AND ASSAULT. TUCKER SAYS HE IS INNOCENT AND CAN PROVE AN ALIBI. HE WAS TAKEN FROM AUBURNDALE TO THE WEST NEWTON POLICE STATION. HE WAS RIGIDLY CROSS-EXAMINED BY CHIEF SHAW, WHO MADE THE ARREST. TUCKER SAT IN HIS CELL AT MIDNIGHT AND DEFIED THE POLICE BY SAYING:

"WELL, THEY'VE ARRESTED ME, BUT THEY'LL HAVE ONE HELL OF A TIME CONVICTING ME!"

TUCKER ATE A HEARTY SUPPER AFTER HIS ARREST, WHISTLED, CHATTED WITH THE POLICE OFFICERS GUARDING HIM, AND SHOWED PERFECT INDIFFERENCE TO HIS SURROUNDINGS.

Chief Shaw says the case against him is perfect. Tucker's reputation is bad. His wife died under suspicious circumstances. He has been arrested for forgery and the police believe he forged the note said to have been left by Mabel Page.

Tucker has been under constant police surveillance for a week. He will be arraigned on the charge of murder before Judge Luce on Monday morning.

The police declare that they will produce at the proper time a witness who will swear that he gave Tucker a ride on a grocery or butcher wagon on the day of the murder, and that Tucker got off at the Page house. Tucker heretofore has declared that he walked to the vicinity of the house.

HOW THE ARREST WAS MADE.

"WE HAVE THE MAN WHO MURDERED MABEL PAGE! HIS NAME IS CHARLES L. TUCKER, OF AUBURNDALE, AND HE WILL BE ARRAIGNED ON MONDAY MORNING ON THE CHARGE OF MURDER."

This is the official statement made by Chief of State Police Shaw after he had taken Tucker into custody. The arrest was made at 6:25 o'clock last night. It came as a surprising climax of a day of dramatic surprises.

Tucker was arrested at his home, No. 58 Bourne street, Auburndale, following a conference between the officers at the home of Judge Kennedy in Newton. With Chief Shaw when the arrest was made was Detective Whitney. The mother of Tucker admitted the officers to the house. They were in civilian clothes. They asked for

"I'LL FORCE THE HANDS OF THE POLICE," DECLARES TUCKER

After his arrival at the West Newton police station, Tucker turned to a reporter for the BOSTON SUNDAY AMERICAN, whom he recognized as having seen during the time of his examination by the police last Monday, and said:

"IT WILL BE THE EASIEST THING IN THE WORLD FOR ME TO ESTABLISH AN ALIBI IN THIS CASE. THE STATE POLICE QUESTIONED ME THE OTHER NIGHT, AND AT THAT TIME THEY APPEARED TO BE THOROUGHLY CONVINCED OF MY INNOCENCE."

"IF THEY ARRAIGN ME ON MONDAY AS I UNDERSTAND THEY ARE GOING TO, THEY WILL BE FORCED TO SHOW THEIR HAND, AND THEN I WILL HAVE LAWYERS THERE WHO WILL LOOK AFTER MY INTERESTS, AND THEN WE WILL SEE JUST HOW STRONG THESE STATE POLICE ARE WHEN THEY PICK UP AN INNOCENT MAN ON THE STREET AND CHARGE HIM WITH SUCH A SERIOUS CRIME AS MURDER."

The police who had Tucker in charge here interrupted the conversation and led the prisoner to a cell.

TUCKER'S REMARKS ON ARREST.

"You'll have one hell of a time in convicting me. I want something to eat, and I want it quick. It will be an easy matter for me to establish an alibi. I need not hand out much--I will go along with you. I never expected to be here. (Police snicker.) My lawyer will make everything all right. I'll let the lawyers do the talking on Monday. I thought this thing was finished when the officers talked to me before."

Tucker.

"HE'S UPSTAIRS!" SAID THE MOTHER. "I'LL CALL HIM DOWN!"

She did so. Tucker walked into the little parlor, where he saw

Continued on next Page, 1st column.

TUCKER THE GUILTY MAN SAYS STATE CHIEF SHAW

Declares in Interview to Boston Sunday American That Case Against the Prisoner is Complete.

After the arrest of Tucker, Chief Joseph E. Shaw, of the State Police, made a statement to the BOSTON SUNDAY AMERICAN, in which he declared that Tucker is the guilty man, and that the case against him is complete.

CHIEF SHAW'S STATEMENT.
"I am glad to have the following statement from the West Newton police station, dated April 19, 1904:
"The man is under arrest. He will be arraigned on the charge of this murder in the Waltham Police Court on Monday morning.
"The particulars of course I can not give you. If you satisfied we have got a man in it. Chief Tucker and myself went out from the West Newton police station and made the conference this afternoon (Saturday). We went to the Tucker home and brought him in."

We asked here at 7 o'clock whether he made any statement other than that when he was questioned before."

Continued on 53rd Page, 5th Column

CHIEF SHAW TELLS HOW TUCKER MET HIS ARREST

"TUCKER HAS MADE QUITE A LOT OF STATEMENTS."

"HE DOES NOT ADMIT THE CRIME--HE DOES NOT HAVE TO DO THAT."

"WE GOT INFORMATION THAT LED TO THE ARREST YESTERDAY."

"TUCKER DENIED THE CRIME AND TOOK HIS ARREST COOLLY."

"WE HAVE BEEN WORKING ON THE TUCKER CASE EVER SINCE HE WAS QUESTIONED BY US BEFORE."

ON THE TRAGEDY

YOUNG GIRL THOUGHT TUCKER ACTED

QUEERLY

Miss Mabel Walker Was With Him the Afternoon of the Murder, and He Seemed to Be Thinking of Something.

Miss Mabel Walker, who lives on Newland street, Auburndale, with her uncle, Jeremiah Walker, a fish dealer, was the young woman seen with Tucker near the

"I hadn't heard of the murder when I met him on Thursday," she said to a **AMERICAN** reporter, "but I must confess I thought he acted queer. He seemed to be

"I saw him again on Saturday, and he told me that he was going to St. Louis with a friend of his, Lester Fletcher, who lives here in Auburndale and works in Benton. He told me that Fletcher was a friend of his, and that they were going West to see the country and he would remain in the fair at St. Louis.

MURDER WASN'T MENTIONED

"I had never met Mr. Tucker until Thursday afternoon," Miss Walker said.

"Although I had heard of him. We were together for some little time. The man wasn't mentioned. As I said, I had heard of it. I don't know whether he was or not."

The Lester Fletcher family had a son of Fred Fletcher of 12 children or so. Turn late. He was to have gone to

the day before that he was seen by
AMERICAN representative and USA
carding the statement made by M
Walker

COULDN'T RAISE THE MONEY
"I saw him last Sunday and he told me he couldn't make it, that it would cost more than he could raise."

money than he could get together, and
he would have to stay at home.

Miss Walker is about twenty years of age and pretty. She came from Maine on the fatal Thursday afternoon she was riding in her uncle's delivery wagon in company with her uncle's grandson.

SAW TUCKER ON BRIDGE.

She says she saw Tucker standing on Western bridge as she passed, at about

The statement told by both Tucker and Miss Wacker that they were together last night in the room is borne out by the testimony of many of the customers of the New Orleans saloon. They all say he saw them at about 1 o'clock working together. At that time they were in Auburnridge, a mile or more from Winton bridge.

THAYER TELLS HOW IT FEELS TO ESCAPE DEATH UNDER ENGINE

**Boston & Maine Brakeman,
Who Marvelously Escaped
With Life From Horrible Ex-
perience, Relates His Thoughts**

Taking the one chance of saving his life out of a thousand that his body would be crushed and mangled to an unrecognizable mass, William H. Thayer lay still while a locomotive passed over him, and escaped, not only alive, but little hurt.

Being between the rails, Mr. Thayer, who had been on duty for some time, saw the engine coming and, knowing that it was a matter of seconds before it would be over him, he lay flat on his back, and waited for the inevitable. He was not hurt, and he was not killed.

"I was sure that for a minute after the accident I would be dead," he said. "I was sure that I would be dead."

He was not hurt, and he was not killed. He was not hurt, and he was not killed. He was not hurt, and he was not killed.

By WILLIAM H. THAYER.
The accident happened at 7:15 a.m. on the 10th of April, 1904. I was on duty as brakeman on the Boston & Maine Railroad.

At 7:15 a.m. on the 10th of April, 1904, I was on duty as brakeman on the Boston & Maine Railroad.

On the morning of the accident, I was on duty as brakeman on the Boston & Maine Railroad. I was on duty as brakeman on the Boston & Maine Railroad.

When I saw the engine coming, I lay flat on my back. I was not hurt, and I was not killed. I was not hurt, and I was not killed.

ENGINE PASSING OVER THAYER.
Unique pressure of mind and quick action saved the life of brakeman when run down by a locomotive.

When I saw the engine coming, I lay flat on my back. I was not hurt, and I was not killed. I was not hurt, and I was not killed.

DR. HALLOCK

ALL DISEASES OF MEN
What is needed in Malaria troubles is a blood purifier and tonic. S. S. S. purifies the germ-tainted blood, tones up the stomach, improves the appetite and invigorates the entire system. It stimulates the torpid, sluggish organs of the body, enabling them to properly perform their functions and carry off the poisonous secretions and excretions. S. S. S. contains no strong minerals, but is strictly a vegetable remedy, a blood purifier without an equal, and the greatest of all tonics. If you have any symptoms of Malaria, write us, and medical advice will be furnished without cost.

NEW NORUMBEGA OPEN-AIR THEATRE.

The thousands of patrons of Norumbega Park, who have enjoyed so many pleasant afternoons and evenings at the vaudeville performances in the open air, will be glad to hear that the new Norumbega Open-Air Theatre, which will be opened in the near future, will be a great improvement on the old one. The new theatre is a rustic playhouse, larger than the old one, and is rain and sun proof. It is a great improvement on the old one.

THE PURPLE-WINGED CENTRE OF DISPUTE.

New York, April 9. Should an angel be portrayed with white or purple wings? This is the question which is now agitating the churchmen of this city. The question is whether an angel should be portrayed with white wings or purple wings.

Miss Alice Bailey, of Atlanta, Ga., tells how she was permanently cured of inflammation of the ovaries, and escaped the surgeon's knife, by the use of Lydia E. Pinkham's Vegetable Compound.

MAD WOMAN PRAYS FELL FIVE STORIES IN LYNN LOCKUP BUT WAS NOT HURT

Lyons, April 9. An only mad woman, who has given five stories of her life, fell from the top of a building in Lyons, N. Y., and was not hurt. She fell from the top of a building and was not hurt.

IT'S FIVE CENTS EVERYWHERE.

PROVIDENCE LABOR UNIONS REBUKE LOCAL MONOPOLY

PROVIDENCE, R. I., April 8.—As a result of the attempt of the Rhode Island District Association, in handing the Rhode Island Central Trades and Labor Union a copy of the general public what it placed for the paper, instead of for the paper, the selling price of the paper has been raised to five cents everywhere. The selling price of the paper has been raised to five cents everywhere.

Resolved, That the Rhode Island Central Trades and Labor Union has been resolved to defend the public interest by the sale of the paper at five cents everywhere.

Resolved, That copies of these mutins be furnished to the local and Boston daily papers.

DEMOCRATS ON CLEVELAND'S ENDORSEMENT OF PARKER

PARTY "SANITY" ASSERTION IS APPROVED

The Leading Democrats of the Country Say Statement of the Ex-President has been of Injury to Party Cause

LOOKED UPON AS THE REACTIONARY ELEMENT OF THE PARTY IN A CONCENTRATED EFFORT IN FAVOR OF THE JURIST

Former President Grover Cleveland's assertion that the Democratic party has wandered from "sanity and patriotic effort" in his remarkable denunciation of the candidacy of Judge Alton B. Parker for the Democratic Presidential nomination has caused a great deal of comment among leading Democratic leaders of the country.

The AMERICAN has made a careful attempt to gather the various Democratic sentiments from representative leaders of the party. The result of this effort is printed in two important and without regard to the preference expressed for the Presidential candidates mentioned.

It is noted that the many of the statements, particularly those from prominent Democrats in the South and West, seem to feel that Mr. Cleveland's assertion has been a serious blow to the party rather than helping it. Parker in the minds of the many of the party in these sections.

In some of the papers it is not only the leaders even express surprise and surprise at Mr. Cleveland's assertion. It is implied that the Democratic party of today is in the same position as the party of 1892. The statements which follow are printed just as they were received from the men making them, and form a fair basis for measuring the effect upon Democratic ranks of Mr. Cleveland's statement which is in general taken to mean that the Democratic party of the Democratic party is making a concerted effort in favor of the Jurist.

WILLIAM C. LYON.
Denver, April 9.—Any person can spread with conditions throughout Colorado and the West cannot deny that the movement of Judge Parker by ex-President Cleveland will reduce Parker's chances in the West. Cleveland is interested in the party, but here in the Rockies, where the disposition is not to trust him. I do not believe he will be permitted to become a national factor in the party organization.

EX-CONGRESSMAN J. J. LEWIS.
Columbus, O., April 9.—Anybody who is so openly indignant at Grover Cleveland can maintain no action in the courts. If it were Judge Parker I would not have him for a candidate.

THOMAS PHILLIPS. Democratic Leader.
Denver, April 9.—I am not inside the question of the nomination of the Democratic party to Judge Parker. I believe that Cleveland's nomination of Parker will injure the latter in Colorado and the farther West.

EX-GOVERNOR C. S. THOMAS.
Denver, April 9.—Of all the Republican Presidents since 1840 there has been no better Republican President than Cleveland. He did more to reduce the Democratic party and deliver it to the hands of the Republicans than any other President. He did more to reduce the Democratic party and deliver it to the hands of the Republicans than any other President. He did more to reduce the Democratic party and deliver it to the hands of the Republicans than any other President.

EDWARD KEATING.
Denver, April 9.—I am not inside the question of the nomination of the Democratic party to Judge Parker. I believe that Cleveland's nomination of Parker will injure the latter in Colorado and the farther West.

JUDGE L. J. PIATTI.
Omaha, Neb., April 9.—I have said before that I am not inside the question of the nomination of the Democratic party to Judge Parker. I believe that Cleveland's nomination of Parker will injure the latter in Colorado and the farther West.

ST. LOUIS, April 9.—I am not inside the question of the nomination of the Democratic party to Judge Parker. I believe that Cleveland's nomination of Parker will injure the latter in Colorado and the farther West.

Grover Cleveland's Indorsement of Parker

Princeton, N. J., April 5.
Grover Cleveland, former President of the United States, dictated the following message at his Princeton home to-day:

"Although I deeply appreciate the very kindly sentiment that prompted my Democratic neighbors in their action of last night at the Princeton primary election, it is a fact that I have just learned of it through a social visitor.

"This may be taken as an evidence of how entirely disconnected I am with the organization activities of politics.

"The recent movement looking to a concentration upon Mr. Parker's candidacy afforded me the greatest possible relief and satisfaction, not only so far as my personal comfort is concerned, but as a Democrat anxious for my party's supremacy and delighted with the prospect of its return to sanity and patriotic effort.

"I do not see how any one professing to be a real, intelligent Democrat can hesitate to accept Mr. Parker, if he should be nominated, as a fit representative of safe and conservative Democratic principles entitled to hearty and unreserved Democratic support.

"Some of us may have been of opinion that another nomination might be more expedient. But that should be a mere matter of opinion which should pass out of sight immediately if the choice of the convention should fall upon Mr. Parker.

"Feeling assured, as I do, that a nomination will be made representing true Democratic principles, I am only concerned about the platform which will be presented to the people with our candidate.

"It should be remembered that the more unobjectionable the candidate we select the more will our opponents be driven to search for campaign material in our platform declaration.

"I do not believe that I can be mistaken in my conviction that in this campaign, of all others, our platform should be short and to the purpose.

"There have been campaigns in which platform-makers have indulged in useless, foolish vagaries in safety.

"There may be such campaigns again, but I know this is not one of them.

"There are certain Democratic doctrines believed in by that conservative element of the party which will control at St. Louis.

"These doctrines should, in no event, be evaded.

"Such of these as appear to furnish at this time the most vital campaign issues should be given the greatest prominence and should be announced in such a way as to exclude all doubt as to their meaning and all appearance of compromise.

"In other words, there are certain lines of battle which promise, better than others, successful results.

"These lines, having been carefully selected and plainly marked out, should be followed persistently and with faith and enthusiasm.

"I earnestly hope that our platform will be short—so short that the voters of the land will read it.

"I hope that in this platform our party will say precisely what it means and that every word it contains will bear its share of meaning in a declaration of principles free from doubt, evasion or disingenuous compromise."

Thinking Grover Cleveland says what you think, had Grover Cleveland opposed it, I would not have been so sure of the other.

J. B. KITCHEN.
COLUMBUS PRESS-POST.

Golumbus, O., April 9.—Mr. Cleveland, in his arrogance, speaks of himself as a Democrat anxious for his party's return to sanity and patriotic effort. By this expression he struts before the public with the thought of his insolence in the arms of his insubordination, questioning the sanity and honesty of a half and half millions of Democrats, while he, himself, at the same time, is a half and half million of Democrats, while he, himself, at the same time, is a half and half million of Democrats.

J. A. CREIGHTON.
Millwaukee Puck.

Omaha, April 9.—I would not give a cent for anything, I don't believe in Cleveland's endorsement of a Democrat.

P. C. HEAFY.
Treasurer of State Democratic Committee.

Omaha, April 9.—There are many Democrats of the country who are better able to see what is really in the part of the party than is Mr. Cleveland. His endorsement is a signal of the Democratic principle. Parker's chances would be much better, I fear.

ACTRESS' LETTERS BETRAY PRISONERS WOMAN ROBBED HIM

The Police Think the Alleged Chance Friend Got \$122, Shoplifters Are Professional Thieves. Watch and Bank Book.

Letters from an actress named Lawrence, who is supposed to be a friend of the actress, were given to the police by a woman who is supposed to be a friend of the actress.
